

Did we mention that rail travel is one of the most environmentally-friendly forms of transport? Oh we did? Good, because it's true. Not only that, but station buildings are doing their bit too. From harvesting water for toilets and plant watering, to using solar panels for electricity, railway stations are being planned with sustainability at the forefront of their designs.

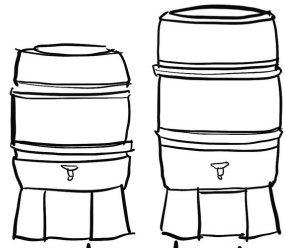

What would you add to the new Coventry Station to make it sustainable?

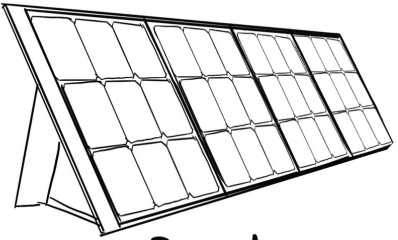

Wind turbines

Bee Hives

Water butts

Solar Panels

Recycling Bins

Wildlife encouraging planting
