

What is an MPAN or MPRN? – Your electricity and gas bill explained.

What is an MPAN?

An MPAN (Metering Point Administration Number) relates to electricity supply only. It is also known as the "supply number" or "M number" and can be found on any of your recent electricity bills in a similar format shown below:

| Supply Number | | | | |
|---------------|----|------|------|-----|
| S | 03 | 801 | 240 | |
| | 23 | 0000 | 0052 | 230 |

The numbers highlighted in yellow are the numbers you need to input into the box labelled MPAN number

The format of an MPAN is standard. The S always appears (so it won't ever be another letter) The top row of numbers is always made up of 8 digits separated in the format shown. The bottom row is always made up of 13 digits, separated in the format shown.

What is an MPRN?

An MPRN (Meter Point Reference Number) relates to gas supply only. It is usually in small print at the bottom of your gas bill. It is also known as the "supply number" or "M number" and can be found on any of your recent gas bills in a similar format shown below:

Meter Point Reference
1572923101

The format of an MPRN is standard and consists of between 6 and 10 numerical digits only.

NB: Your MPRN should not be confused with your gas supplier account number or the meter serial number printed on the meter itself. If your MPRN is not printed on a recent gas bill please call National Grid on 0870 608 1524 and they will be able to tell you your MPRN.

Why do we need to know your MPAN/MPRN?

Each MPAN/MPRN is unique to each supply point. This makes it easy for us to identify your meters and ensures that we are using data from the correct property.
