

## **STATEMENT OF REASONS**

As part of the ongoing development of the signalised traffic island to the A452 Europa Way / Queensway junction, an extension of existing and introduction of new NWAAT's is required.

This is to ensure that the traffic signal junctions operate safely and efficiently it is necessary to prevent vehicles parking, this ensures that as drivers are approaching the junction, they can clearly see the traffic lights and the pedestrians waiting to cross the road.

Furthermore, by preventing vehicles parking, the queuing length and delays are reduced, since drivers can use the available road space to queue and wait for the green signal.

Increasing the current double yellow lines should have the effect of keeping the carriageways clear of obstruction, ensure the free flow of traffic, preserve visibility and aid road safety.
