18	West and Shires Permit Scheme Authority Addendums	86

1 Introduction

- 1.1.1.1 The West and Shires Permit Scheme (“the WaSP scheme”) has been developed under the powers provided in Part 3 of the Traffic Management Act 2004 (“TMA”) and the Traffic Management Permit Scheme (England) Regulations 2007, Statutory Instrument 2007 No. 3372 made on 28 November 2007 and the Traffic Management Permit Scheme (England) (Amendment) Regulations, Statutory Instrument 2015 No. 958 made on 26th March 2015. These regulations are referred to as the “Permit Scheme Regulations” within this permit scheme.. It is a permit scheme for the purposes of Section 32(1) of the TMA.
- 1.1.1.2 When originally preparing this permit scheme, the highway authorities had regard to the guidance issued by the Secretary of State and the Department for Transport contained in the *Statutory Guidance for Permits (March 2008)*, the *Permit Schemes – Additional Guidance (January 2013)*, the *Permit Fees Guidance (March 2008)* and the *Code of Practice for Permits (March 2008)*.
- 1.1.1.3 The highway authorities in preparing this scheme also had particular regard to the requirements of Part 5a (in particular Section 49(a)) of the Disability Discrimination Act 1995 and associated codes of practice.
- 1.1.1.4 The WaSP scheme replaces the current ‘noticing’ system under the New Roads and Street Works Act 1991 (“NRSWA”) for works taking place on the highway. The WaSP scheme allows those participating authorities (“Permit Authority”) to better manage activities on the highway and minimise disruption and inconvenience.
- 1.1.1.5 The WaSP scheme requires an activity promoter to apply for a permit in order to ‘book’ time on the highway. The Permit Authority issues permits with conditions attached to better focus the activity in terms of reducing the impact of road users and other stakeholder; this might be in relation to the timing of the works, the traffic management and methodology or any other factor that is deemed important. Equally the Permit Authority can refuse to issue a permit if it feels the planning or the detail of the application is insufficient. The WaSP scheme allows the Permit Authority to recoup the cost of coordinating and managing the activity by charging for issuing a permit.
- 1.1.1.6 As required by Regulation 4(c), under the WaSP scheme, activities for both the statutory undertaker and the highway authority are treated similarly in terms of coordination and the setting of conditions. The Permit Authority will operate in a manner that demonstrates parity between applicants at all times and those departments dealing with permits and coordination will be separated from other highways activities.
- 1.1.1.7 Provisions of NRSWA that have been disapplied and modified in respect of the WaSP scheme are set out in appendix B. Activities by undertakers licensed under Section 50 of NRSWA do not require permits and such activities will continue to be subject to those requirements of NRSWA as set out in *The Street Works (Registers, Notices, Directions and Designations) (England) regulations 2007* and the *Code of Practice for the Co-ordination of Street Works and Works for Road Purposes and Related Matters*, and as subsequently amended.
- 1.1.1.8 Previous versions of the WaSP scheme were brought into effect by a legal order from the Secretary of State under Permit Scheme Regulations 3(1).
- 1.1.1.9 This version of the WaSP Scheme comes into force through the powers conferred by Section 33A (2) of the TMA by an Order made by the WaSP Permit Authority. This Order comes into effect on **1st October 2015**.

- 1.1.1.10 In making the changes required to the WaSP Scheme the Permit Authority undertook a consultation in accordance to Permit Scheme Regulations prior to the revised Permit Scheme coming into effect. Transitional arrangement to bring a revised WaSP scheme into effect will be contained within each Permit Authority addendum.
- 1.1.1.11 The WaSP scheme will be reviewed annually by all participating authorities. A glossary of terms is provided in Appendix A.

2 Principles of a Permit Scheme

2.1 Managing the Network

- 2.1.1.1 Any activity on the highway has the potential to cause inconvenience to vehicular traffic, pedestrians, cyclists and others. They may also cause inconvenience for residents and business. Where the activity affects traffic flows directly there is the likelihood of congestion and disruption.
- 2.1.1.2 Effective coordination and management of the highway requires reliable and timely information being communicated and enables differences between those competing for space or time in the street to be resolved in a positive and constructive way. In addition, efficient design of an activity on the highway will significantly mitigate the potential disruption of that activity.
- 2.1.1.3 Permits provide the basis for this with the requirement to manage the applications from utility and highway works in a proactive manner, which are the two activities that often have the greatest effect on traffic and disruption.
- 2.1.1.4 Section 59 of NRSWA places a duty on the street authority to coordinate works of all kinds on the highway. Of equal importance is the parallel duty under Section 60 on undertakers to cooperate in this process.
- 2.1.1.5 The Traffic Management Act 2004 and the associated Permit Scheme Regulations widen the Section 59 coordination duty to include other prescribed activities that involve temporary occupation or use of road space and incorporates any activities included in a Permit Scheme. In addition, Section 16 of the TMA introduces a network management duty on the traffic authority and requires them to secure the expeditious movement of traffic on their network, and facilitate the movement of traffic on the networks of their neighbouring authorities.

2.2 Operational Purpose of the Permit Scheme

- 2.2.1.1 The WaSP scheme takes into consideration these statutory duties placed on the permit authorities and in particular aims to benefit a number of areas that are important for delivery of the participating WaSP scheme authority's local transport plans, including:
 - coordination of activities on the highway through better active management of the road network
 - environmental benefits stemming from the reductions in disruption and congestion and improvements in material usage
 - long term maintenance of the highway pavement asset
 - public health benefits from greater control over pollution and environmental impacts as well as safe working practices
 - incident response and improved information to the travelling public
 - public transport benefits which come from more structures and coherent stakeholder engagement at all stages of an activity's life
 - improved asset management
- 2.2.1.2 The WaSP scheme is a 'common scheme', allowing other authorities in the West Midlands and surrounding areas to use it as framework; a single set of rules upon which each participating authority can apply independently on their own roads to encourage consistency as far as practical whilst recognising the need for local discretion and regional differences.

- 2.2.1.3 The WaSP scheme will achieve significant savings for the undertakers and promoters using common methodology and the sharing of practical knowledge and expertise. The operating authorities will form working groups to ensure a proactive, consistent and practical approach to exploring ways to reduce the impact of highways activities, while helping initiatives to facilitate economic growth.
- 2.2.1.4 The WaSP scheme is not intended to be bureaucratic, and an important consideration in its operation is ensuring that those activities that are important to the economic growth of UK plc such as major civil or telecoms/digital infrastructure projects and major events are treated and managed in a way that benefits all stakeholders. This will ensure the safety of the activity on the highway, the quality of workmanship and network assurance while not unreasonably delaying these activities from taking place. To this end:
- fee levels have been developed by each individual WaSP scheme authority that are considered proportionate to the significance of the street and the likely amount of work required to effectively coordinate and manage activities on that street in their scheme area. These are provided in each participating authority's Addendum to this scheme (chapter 18).
 - discounts are available for those promoters that are able to deliver work in a proactive way to lessen the impact of their activities, for instance through collaboration or innovation
 - there will be a flexible approach to works management including 'early starts' and in particular the scheduling and delivery of major schemes
 - the scheme uses the Statutory Guidance for Permit Conditions as developed by the National Permit Forum to assist promoters identify and use these to best effect through a common and consistent approach
 - WaSP scheme authority's aim to adopt recommended operational approaches as directed in National Permit Advice Notes
 - a WaSP scheme Operational Guidance document has been developed as part of the scheme to provide further guidance and clarification and best practice on many elements of the scheme's day-to-day operation. This is a 'live' document, and the intention is that over time it will be adapted and added to in order to offer clear advice and agreements reached.
- 2.2.1.5 The WaSP scheme authorities will actively promote a cultural step change in attitudes from other departments within their authority that play an important role in the overall network assurance, by:
- working closely with an authority's own highways contractors to improve working practices and ensure high quality of information and comprehensive planning processes
 - forming network management teams to bring together the coordination of all highways activities including for instance events and highways operations
 - greater engagement with Development Control and Planning departments to bring in their structures and processes to the forward planning process to ensure better coordination and delivery of their activities that affect the highway
 - closer working with other divisions for instance environmental health, parks and the environment, parking, parish and town councils
- 2.2.1.6 The WaSP scheme authorities will actively promote a cultural step change in attitudes from statutory undertakers. To this end:

- substantial 'informal' consultation has been undertaken in the manner of permit forums which included representatives from West Midlands Highway Authority and Utility Committee (HAUC) and statutory undertakers, neighbouring authorities, local politicians and advice from a specialist consultancy to help all stakeholders understand the schemes intentions and to enable key stakeholders to objectively consider the application and delivery of the scheme. Open discussions have very much lead the direction many elements of the scheme design have taken and concerns raised by all parties have been openly discussed
- sharing of information and discussions has itself informed the development of WaSP scheme Operational Guidance and decisions about training methods for both activity promoters and the permit authorities
- it is anticipated that regular meetings will be held between the statutory undertakers and the WaSP scheme permit authorities to discuss matters of operational performance and explore practical ways of undertaking essential works, exploring innovative methods of working and reducing disruption

2.2.1.7 Principles engrained in NRSWA and TMA are that effective permit scheme objectives must include provisions

- to ensure safety
- to minimise inconvenience to people using a street, including a specific reference to people with a disability
- to protect the structure of the street and the integrity of the apparatus in it.

2.2.1.8 In addition *The Traffic Management (Guidance on Intervention Criteria) (England) Order 2007* sets out what the Secretary of State would take into account in determining whether or not a local traffic authority is performing its network management duties. This includes

- co-ordinating and planning works and known events
- ensuring parity with others, by applying the same standard or approaches to an authority's own works as to those of other works promoters

2.3 Key Scheme Objectives

2.3.1.1 The scheme's primary objectives are:

- to increase the efficient running of the highway network by minimising the disruption and inconvenience caused by road works and other highway events and activities through proactive management of activities on the highway
- to improve the quality and timeliness of information received from all activity promoters to increase and improve the publicly available data for integration into the Council-wide travel information
- to encourage a proactive approach to planning and undertaking of works on the highway from promoters and thus lessen the impact of activities on road users
- to protect the structure of the street and the integrity of the apparatus in it
- to ensure safety of those using the street and those working on activities that fall under the Scheme, with particular emphasis on people with disabilities
- to ensure parity of treatment for all activity promoters particularly between statutory undertakers and highway authority works and activities

2.3.1.2 The successful performance of the Scheme will bring a number of subsidiary benefits. These include:

- maximising the safe and efficient use of road space
- providing reliable journey times
- improving the resilience of the network
- minimising inconvenience to all road users
- improving public satisfaction

2.4 Measuring the Objectives

- 2.4.1.1 The *Statutory Guidance for Permits* indicates that aspects of the scheme objectives should be measurable while Regulation 4(d) requires the Permit Authority to describe how they will evaluate the scheme.
- 2.4.1.2 Chapter 14 sets out in more detail the metrics that will be used to measure how the scheme is performing. These are based on the Operational Measures and Key Performance Indicators listed below.
- 2.4.1.3 KPIs and Operational Measures will be published monthly by each individual Permit Authority and will be made available in a raw format (without additional analysis) on their website and at performance and coordination meetings.
- 2.4.1.4 An annual report will be produced either by each individual Permit Authority, or as a group, where the annual KPIs and Operational Measures will be analysed more fully to evaluate the scheme.

2.4.2 Key Performance Indicators

- 2.4.2.1 Regulation 40 requires the scheme to show parity of treatments for all types of activity promoters.
- 2.4.2.2 Equality and parity of treatment will be measured through Key Performance Indicators. The *Code of Practice for Permits* requires that a permitting scheme must use at least four of the seven given performance indicators, of which KPI 1 & 2 are mandatory.
- 2.4.2.3 Parity of treatment will be demonstrated through
- KPI 1 – The number of permit and permit variation applications received, the number granted and the number refused
 - KPI 2 – The number of conditions applied by condition type
 - KPI 3 – The number of approved extensions
 - KPI 4 – The number of occurrences of reducing the application period ('early start' requests)
- 2.4.2.4 In order to show that the permit authorities are operating the scheme in a fair and equitable way each, those departments responsible for examining and granting permits will be separated from the highway activities of the authority.

2.4.3 Operational Measures

- 2.4.3.1 Operational measures are performance reports that can be used to provide comparative measures of the WaSP scheme and allow discussion on whether the scheme objectives have been met. The evaluation will allow comparison between authorities operating the scheme as well as against the previous year data, and baseline data from prior to the introduction of the WaSP scheme. The reports will show
- number of overrun incidents
 - average works durations
 - number of days of reduced occupation

- number of collaborative works and the days of saved occupation
- the number of refused permits by refusal reason
- number of permit cancellations
- number of first time permanent reinstatements
- site safety
- permit condition inspection results

2.4.3.2 Permit authorities may include their own performance monitoring measures as part of their local political, community or departmental requirements.

2.4.3.3 The operational measures detailed in this document are 'draft' metrics. This will allow them to be changed as new reporting tools or more consistent methods of analysis across the industry are developed by the WaSP scheme Operational Groups, the street works software suppliers, the DfT or the National KPI working party.

2.4.4 Working Groups

2.4.4.1 The permit scheme authorities will establish an Operational Board to oversee the operation of the permit scheme. An Operational Group will also be formed between permit authorities, statutory undertakers and other stakeholders to enable discussion and evaluation of the scheme objectives.

2.4.4.2 Smaller working groups will be created when there is a need to consider specific issues arising from the day-to-day operation of the permit scheme and will also provide a point of reference for establishing best practice and encouraging enterprise and innovation in the region from permit authorities and activity promoters.

2.4.4.3 Working groups will develop permit advice notes specific to the scheme to encourage consistent application of the scheme principles by both permit authorities and activity promoters.

3 Principles of Coordination and Permit Management

3.1 Principles of Coordination

- 3.1.1.1 To meet the objectives and outcomes required by the WaSP scheme activity promoters and permit authorities need to adhere to four main principles:
- The need to balance the potentially conflicting interests of road users and activity promoters' customers
 - The importance of close cooperation and liaison between permit authorities and activity promoters
 - An acknowledgement that activity programmes and practices may have to be adjusted to ensure that the statutory objectives of the coordination provisions are achieved
 - Successful coordination requires accurate and timely information and good communication between permit authorities and activity promoters.
- 3.1.1.2 The Scheme will operate in a way that encourages better planning, scheduling and management of activities so that traffic disruption is minimised as far as practically possible.
- 3.1.1.3 The principles of Sections 58 and 58a of NRSWA will operate alongside the WaSP scheme to help coordinate large resurfacing schemes and utility projects.
- 3.1.1.4 The Scheme will operate in a way that is not intended to prevent or delay activities that the activity promoters consider necessary or are obliged to do. Instead, the operation of the scheme will seek to ensure that the Permit Authority will proactively work with promoters to facilitate and manage their works.
- 3.1.1.5 Small scale and short duration activities, particularly in non-traffic-sensitive situations, are unlikely to cause significant disruption. However, where several activities are close together they can be disruptive or cause a nuisance. Effective coordination therefore needs to take into account proposals of every scale and duration.
- 3.1.1.6 The Permit Authority will undertake the principles of coordination as described in the Code of Practice for Permits, the Code of Practice for the Co-ordination of Street Works and Works for Road Purposes and Related Matters and related guidance issued by the Department for Transport and any other such best practice guidance in general use.

3.2 Principles for Promoters

- 3.2.1.1 The term 'activity promoter' applies equally to statutory undertakers and their contractors and to the highway authority and their contractors.
- 3.2.1.2 It is essential that all promoters take the permit scheme objectives and the wider TMA objectives into account when planning and managing their works.
- 3.2.1.3 The prime responsibility for planning, supervising and carrying out individual activities falls on the activity promoter.
- 3.2.1.4 Promoters must consider the needs of all road users, including those with disabilities – whether they are pedestrians, equestrians, cyclists or motorists – throughout the planning and execution of activities. These will have implications for
- the timing of activities, for example the duration of the works, avoiding peak periods and consideration of out of hours working

- the way in which activities are carried out, including relevant health and safety and traffic management legislation
- the programming of activities which include coordination of activities and the possibility of collaborative working

- 3.2.1.5 Promoters should recognise that the statutory application periods are a minimum and that whenever possible longer periods should be given, particularly if the works are likely to be disruptive. Where modifications are required then the activity promoter should discuss these with the Permit Authority as soon as possible. This benefits both promoter and Permit Authority since it ensures that all implications of the activity can be considered more fully.
- 3.2.1.6 Promoters should ensure that they engage fully with any stakeholders and interested parties that the Permit Authority deems necessary and be prepared to modify their proposals where appropriate and practical.
- 3.2.1.7 Promoters should take into account the space needed for both the works and the storage of plant and materials when assessing the likely disruption the activity might cause.

3.3 Principles for the Permit Authority

- 3.3.1.1 In order to respond to a permit application the Permit Authority must consider all aspects of the proposed activity and other influences that may affect traffic. These include, but are not limited to
- the road network capacity
 - the scope for collaborative working opportunities, including trench and duct sharing between promoters or working within the same area of traffic management
 - the optimum timing and duration of activities
 - the effect on traffic both on the Authority's network and adjoining highway authority
 - safety for those engaged in the activity as well as the general public
 - appropriate techniques and arrangements particularly at road junctions and pinch points, strategically significant streets or those with special engineering difficulties
 - environmental impacts from both noise, excessive spoil and materials, and congestion
 - the effect of other activities that take place on or affect the highway, for instance events and street parties, licensed operations or other consents under the Highways Act 1980, developments that affect the highway, highways activities such as gritting or rubbish clearance.
- 3.3.1.2 The Permit Authority will consider the difficulties that any proposed activity will or may cause and, where possible, agree an acceptable way forward either from the information provided in the permit application or through further discussion. Any agreements made will be validated using specific conditions that will apply to each activity to ensure that the work is carried out in the manner agreed, so as to minimise disruption and inconvenience particularly to local businesses and residents.
- 3.3.1.3 The Permit Authority will liaise with all necessary stakeholders and interested parties where the activity is likely to affect these organisations and will take into account their opinions and considerations. These may include, but are not limited to

- the emergency services, normally via the Police
 - public transport operators and authorities, including Network Rail
 - local authority areas such as planning or environmental health officers, or parish, town or borough councils
 - other appropriate bodies, for example those representing disabled people, pedestrians, cycling groups, hauliers and motorists
 - the Ministry of Defence, English Heritage, the National Farming Union, local tourism boards, the Environment Agency and any organisation as required
- 3.3.1.4 The Permit Authority will allow early starts to a permit (a reduction to the minimum notice period as set out in table 1, section 7.1) providing that
- it does not conflict with other activities
 - there is a legitimate reason for the request and not a result of poor works planning by the activity promoter
 - activity promoters do not use early starts regularly to conceal poor works management
- 3.3.1.5 The WaSP scheme will operate in a fair and equitable way ensuring a level playing field with all promoters competing for time and space on the highway. The Permit Authority will ensure sufficient separation between those operating the permit scheme and those responsible for highway activities so that parity of treatment is evident.

3.4 Permit Management and Analysis (Coordination in Action)

3.4.1 Technology

- 3.4.1.1 The day-to-day co-ordination of the majority of proposals can be achieved only through the use of technology, especially given the relatively short lead times for minor and standard works.
- 3.4.1.2 Permit applications must include locations by means of Ordnance Survey National Grid References (NGR). This together with the use of the nationally consistent street gazetteer means that the Permit Authority will be able to visualise the impact of different activities on their networks and the interaction between these activities.
- 3.4.1.3 To increase the benefit of these changes, the Permit Authority as the highway authority will work toward the inclusion of NGRs on other relevant documents, such as applications for skips or scaffolding on the highway.

3.4.2 The Register

- 3.4.2.1 In accordance with Section 7 of *The Traffic Management Permit Scheme (England) regulations 2007*, the Permit Authority will maintain a register of each street covered in their scheme, as well as a register under Section 53 of NRSWA for other street information that are not part of the WaSP scheme. Advice is available from the NSG concessionaire concerning setting up the authority's ASD correctly in order to manage these parallel registers. Further details about the register are given in Appendix C.

3.4.3 Collaborative Works

- 3.4.3.1 Collaborative working may include
- trench sharing
 - activities that share traffic management or road space
 - multi-agency activities that limit the number of days an area of road space is occupied

- 3.4.3.2 The Permit Authority will proactively seek to encourage collaborative working opportunities between any activity promoters. It is accepted that there are often issues with such arrangements, particularly contractual complications and CDM or site management. Nevertheless, every opportunity will be sought to minimise the disruption to users of the highway.
- 3.4.3.3 In the event of collaborative working, the primary promoter should take overall responsibility as the agreed point of contact with the Permit Authority. The secondary promoter(s) retain the same responsibility for submitting permit applications for work to be carried out by them or on their behalf.
- 3.4.3.4 If the nature of joint working is trench sharing, the primary promoter will excavate the trench and install its own apparatus. The secondary promoters will install their apparatus in the same trench. The primary promoter will then backfill and reinstate the trench unless it has been agreed with both the Permit Authority and the relevant secondary promoter beforehand that one of the secondary promoters do it. In this case, the responsibility for the quality of the reinstatement will lie with the activity promoter that completed it. A similar approach to primary and secondary promoters will be followed for other forms of collaborative working.
- 3.4.3.5 Only those permit applications submitted by the primary promoter are required to show the estimated inspection units attributable to the street works. The primary promoter must detail the other promoters involved and the scope of the collaborative working in the initial application. The primary promoter must also ensure that estimates of works duration are agreed and/or confirmed with the secondary promoter(s) when submitting notices. This is necessary in order to comply with the overrun charging requirements in the Permit Scheme Regulations.
- 3.4.3.6 To avoid any ambiguity, the Permit Authority will issue permits to all the activity promoters involved, not just the primary promoter. However, the fees will be adjusted to reflect the collaborative approach, provided all the applications meet the criteria set out in Section 31(4) of the Permit Scheme Regulations and described in section 9.4.
- 3.4.3.7 Further reductions may be made at the discretion of the Permit Authority where the collaborating promoters can demonstrate to the Permit Authority significant benefits in terms of the permit scheme objectives. All issued permits shall record the identity of the primary promoter and all the secondary promoters.

3.4.4 Forward Planning

- 3.4.4.1 Forward planning information on long-term programmes from all activity promoters will help permit authorities to co-ordinate activities. It will also help promoters to identify opportunities for joint working and to coordinate the timing of resurfacing. This might include mains replacement programmes or the reconstruction of main roads, which will be planned several years ahead.
- 3.4.4.2 Promoters are encouraged to maximise the use of forward planning notices even if the information being submitted is incomplete or uncertain. This will enable better coordination opportunities. Forward planning notices should be reviewed and updated regularly to include details as they are finalised. Promoters should follow the guidance given in the *Code of Practice for Permits* and electronic transfer of notices (EToN) technical specification with regard to the content of forward planning notices and how they are recorded on the register.
- 3.4.4.3 It should be noted that forward planning notices do not remove the requirement to apply for a Provisional Advance Authorisation or permit at the appropriate time.

4 Scope of the Permit Scheme

4.1 Streets Covered in the WaSP Scheme

- 4.1.1.1 As required by Regulation 7, The “specified area” for the purposes of each authority operating the WaSP scheme will be the geographical area encompassed by that local authority’s boundary.
- 4.1.1.2 All streets maintained by, or on behalf of, the local authority are included within this scheme as set out in Regulation 8. These are available on request as part of each participating authority’s Addendum (Chapter 18), and are identified within the authority’s Additional Street Data (ASD).
- 4.1.1.3 Trunk roads and motorways for which Highways England is the highway authority are not included in the scheme.
- 4.1.1.4 Privately maintained streets are not included in this scheme but will be added if they are subsequently adopted by the highway authority and will be shown as such within the local street gazetteer.
- 4.1.1.5 Activities on privately maintained streets will be recorded on the authority’s street works register as notices under Section 53 of NRSWA. See Appendix C.2.

4.2 Street Gazetteer

- 4.2.1.1 For the purposes of the WaSP scheme the term “street” refers to a length of highway associated with a Unique Street Reference Number (USRN) as determined by the National Street Gazetteer Concessionaire.
- 4.2.1.2 The Permit Authority will maintain and publish a gazetteer of all streets operating under the permit scheme to level 3 standard (as defined under BS7666) including the USRN and additional street data (ASD) which will contain the information required by, and defined in, the Technical Specification for EToN.
- 4.2.1.3 Where the ASD designations are revised by the Permit Authority the criteria and procedures detailed in the *Code of Practice for Permits* or subsequent guidance will be followed.
- 4.2.1.4 Further detail on the content and application of the street gazetteer are provided in Appendix D, and chapters 4 and 5 of the *Code of Practice for Permits* and related guidance.

4.2.2 Reinstatement Designation

- 4.2.2.1 Reinstatement categories are defined in Section 1.3 of the statutory *Specification for the Reinstatement of Openings in Highways* (SROH) and are the same as those used under NRSWA. Designations for each street in the local street gazetteer will be provided in the authority’s ASD.

4.2.3 Traffic-Sensitive Streets

- 4.2.3.1 Traffic-sensitive streets are defined under regulation 16 of The Street Works (Registers, Notices, Directions and Designations) (England) regulations 2007.

4.2.4 Strategically Significant Streets

- 4.2.4.1 Strategically significant streets includes traffic-sensitive streets, as well as streets which fall into reinstatement categories 0, 1 or 2.
- 4.2.4.2 In addition, the Permit Authority may include other streets that are significant locally, for instance streets linking rural communities where the impact from activities on these roads could be severe. This definition is given in the DFT document *Permit Schemes – Additional Guidance* (January 2013).

- 4.2.4.3 In general, within the WaSP scheme the terms “strategically significant streets” and “traffic-sensitive streets” will be used interchangeably unless a difference is indicated.
- 4.2.4.4 For the purposes of permit charges and notification timescales, strategically significant streets will fall under the ASD and EToN designation of ‘traffic-sensitive’.
- 4.2.4.5 For the purposes of Section 74 overruns, those strategically significant streets that do not already fall within the regulatory definition of ‘traffic sensitive’ will not be considered as traffic-sensitive and will not attract the higher charge bands. In general this will apply to those ‘other locally significant’ streets indicated by the DfT in their guidance.
- 4.2.4.6 A full list of all streets included in the permit scheme, with an indication of those considered strategically significant, will be detailed within the authority’s ASD and is available as a list from the Authority if required.

4.2.5 Early Notification of Immediate Activities

- 4.2.5.1 Some streets or parts of a street are particularly vulnerable to traffic disruption. For these locations, the Permit Authority may wish to have the earliest possible information about an Immediate activity to enable it to initiate traffic management arrangements and provide information to the public that will mitigate the impact of the activity. These streets will be indicated within the authority’s ASD as those where “early notification of Immediate Activities is required”. Section 13.9 provides further detail on emergency traffic management measures.

4.2.6 Other Designations

- 4.2.6.1 Where a street or section of street requires the consultation with another organisation, for instance areas of archaeological or environmental importance or sensitivity, sites affecting the Ministry of Defence etc, this will also be recorded in the authority’s ASD and will also be detailed as part of the street list provided in the WaSP scheme Operational Guidance.

4.3 Activities Covered by the Permit Scheme

- 4.3.1.1 For the purposes of the WaSP scheme Specified Works are “registerable activities” as defined in *The Street Works (Registers Notices Directions and Designations) (England) regulations 2007* and any subsequent amendments. This applies equally to streets works as defined by Section 48(3) of NRSWA and works for road purposes as defined by Section 86(2) of NRSWA.
- 4.3.1.2 The term “specified works” is used generically in the RPermit Scheme Regulations. The term “activity” is used in this scheme to encompass any registerable activity that requires a permit.
- 4.3.1.3 The term “activity” also anticipates subsequent sets of Permit Scheme Regulations which may extend the scope of permit schemes to other activities on the street.

4.3.2 Registerable Activities

- 4.3.2.1 For clarity the following works are registerable for all promoters and information related to them has to be recorded on the register and may only take place with a valid permit.
- all activities that involve the breaking up or resurfacing of any street, (but see below for pole testing involving excavation)
 - all activities that involve the opening of the carriageway or cycleway of traffic-sensitive streets at traffic-sensitive times

- all activities that require the use of any form of temporary traffic control as defined in the Code of Practice for Safety at Street Works and Road Works
- all activities that reduce the number of lanes available on a carriageway of three or more lanes
- all activities that require a temporary traffic regulation order or notice, or the suspension of pedestrian crossing facilities
- all activities that require a reduction in width of the existing carriageway of a traffic-sensitive street at a traffic-sensitive time

4.3.3 Bar Holes

4.3.3.1 Bar holes which are used to detect and monitor gas leaks fall into the registerable category. When bar holes are carried out and it is known that no further activity in the street is required (such as when a gas leak is reported but none detected), a registration under Section 70 (3) of NRSWA should be sent within 10 ten days, once final monitoring checks have been established. The bar holes will count as a single excavation and reinstatement for registration purposes.

4.3.3.2 When required, an application for a permit in respect of a bar hole must be made within two hours of the commencement of any other registerable activity, or in the case of the registerable activity commencing out of normal working hours within two hours of the commencement of the next working day. In this latter case, these bar holes will not count as further excavations and reinstatements for the purposes of registrations but will be incorporated with the registerable activity.

4.3.4 Works for Road Purposes

4.3.4.1 All works carried out by the highway authority are works for road purposes and require a permit if they fall under the definition of registerable as given in section 4.3.2.

4.3.4.2 Works carried out by an undertaker on behalf of the highway authority, for instance new connections or disconnections to streetlights, are works for road purposes. It is for activity promoters to ensure that permit applications for such activities are made and that the activity is registered, as appropriate.

4.3.4.3 Fault repairs in connection with street lighting are not works for road purposes. They should be treated as street works and must follow the normal procedures.

4.3.5 Other Highways Activities

4.3.5.1 Works and repairs for District and Parish Councils acting on their own account and not on behalf of Highway Authority, including works on street lighting etc., are considered as street works and thus will attract the same charges and penalties as any other statutory undertaker.

4.3.5.2 It is for activity promoters to ensure that permit applications for such activities are made and that the activity is registered, as appropriate.

4.3.5.3 Core holes not exceeding 150 mm in diameter do not require registration in advance, unless one or more of the rules above relating to traffic management impact apply.

4.3.6 Obtaining a Permit

4.3.6.1 Other than for Immediate activities, any promoter that wishes to carry out an activity is required to first obtain a permit from the Permit Authority.

- 4.3.6.2 Immediate activities require a permit however since such activities are by definition emergency or urgent an application may be given within two hours of the activity starting or in the case of the activity commencing out of normal working hours, within two hours of the commencement of the next working day. An Immediate application should comply with any conditions specified by the Permit Authority whether generic for such activities or specific to one activity (see section 6.10).

4.3.7 *Non Registerable Activities*

- 4.3.7.1 The following works are not classed as registerable:
- Traffic census surveys have deliberately not been included, as disclosure of this information prior to a census taking place can encourage a change to the normal pattern of traffic flow.
 - Pole testing which does not involve excavation does not require a permit.
 - Testing of fire hydrants by fire service vehicles, provided the work is done outside traffic-sensitive periods.
- 4.3.7.2 Section 50 licences do not require a permit as defined in the Permit Scheme Regulations, however a licence will be issued in line with the permitting requirements of the WaSP scheme and the activity will be entered onto the street works register to aid coordination.

5 How to make Permit Applications

5.1 General Principles

5.1.1 *Purpose*

- 5.1.1.1 Any promoter of a registerable activity that wishes to carry out such an activity must obtain a permit from the Permit Authority. The intention is to better control activities to minimise disruption and inconvenience and for those activities to be carried out in a manner that takes into account the needs of others.
- 5.1.1.2 The permit will allow the activity promoter to carry out the specified activity:
- at the specified location
 - between the dates shown; and
 - subject to any conditions that may be attached.
- 5.1.1.3 The permit will include all of the information as supplied by the activity promoter in the permit application; a permit shall be issued in accordance with the formats given in the Technical Specification for EToN (see Chapter 7).
- 5.1.1.4 Permits will be required for all registerable activities on all streets designated as public highway as specified on the local street gazetteer.
- 5.1.1.5 The content of applications and notifications and communications relating to all aspects of the permit will be made using, and will comply with, the definitive format and content of the protocols as set out in the EToN technical specification, which may change from time to time. Where there is a failure in the system then other methods of communication will be acceptable (see section 5.8).

5.1.2 *Key differences from NRSWA*

- 5.1.2.1 The key differences between operating a permitting system and a noticing system are:
- a requirement to obtain permission – effectively booking a time slot, rather than informing the Permit Authority of the intention to work
 - on strategically significant streets the start and end dates are fixed and a permit is not valid before the given start date nor once the end date is passed
 - on non-strategically significant streets, there is some flexibility over the start date although the duration will be fixed
 - the times at which work can be carried out are more strictly controlled
 - conditions affecting the way in which work is carried out can be attached to permits

5.1.3 *Types of Permit*

- 5.1.3.1 WaSP allows two types of application:
- Provisional Advance Authorisation (PAA). These are used only for major activities (as defined in Permit Scheme Regulations) which are likely to be large and/or more disruptive and provide advance notice but not necessarily with full details of the final activity. PAAs are similar to Section 54 notices under NRSWA
 - Permit Application (PA). These will contain fully accurate and timely details as prescribed and will be required for all registerable activities, including as a follow-up to a PAA. These are similar to Section 55 notices under NRSWA.

5.2 Activity Categories

5.2.1.1 WaSP applies to the following works categories, as defined in *The Street Works (Registers, Notices, Directions and Designations) (England) regulations 2007*. Application periods are set out in table 1, section 7.1.

5.2.2 Major Activities

5.2.2.1 Major activities are those that:

- have been identified in an activity promoters' annual operating programme or are normally planned or known about at least six months in advance of the proposed start date for the activity; or,
- require a temporary traffic regulation order (not a temporary traffic notice) under the Road Traffic Regulation Act 1984 for any other registerable activities other than immediate activities; or,
- have a duration of 11 days or more, other than immediate activities.

5.2.3 Standard Activities

5.2.3.1 Standard activities are those activities, other than immediate or major activities, that have a planned duration of between four and ten days inclusive.

5.2.4 Minor Activities

5.2.4.1 Minor activities are those activities, other than immediate or major activities, where the planned duration is three days or less.

5.2.5 Immediate Activities

5.2.5.1 Immediate Activities are either emergency works or urgent works:

5.2.5.2 Emergency works, which are defined in Section 52 of NRSWA, are works required to end, or prevent, circumstances, either existing or imminent, that might cause damage to people or property. This applies to both street works and works for road purposes which fall within the definition of activities. The term also includes activities not falling within that definition but which cannot be severed from those that do – such as activities away from the emergency site that are necessary to shut off or divert a supply. Remedial works to dangerous defective reinstatements are classed as emergency works (but there will be a need to cross reference these to the permit given for the parent activity)

5.2.5.3 Urgent activities are defined in the Permit Scheme Regulations as activities:

- (not being emergency works) whose execution at the time they are executed is required (or which the person responsible for the works believes on reasonable grounds to be required):
 - (i) to prevent or put an end to an unplanned interruption of any supply or service provided by the activity promoter;
 - (ii) to avoid substantial loss to the activity promoter in relation to an existing service; or,
 - (iii) to reconnect supplies or services where the activity promoter would be under a civil or criminal liability if the reconnection is delayed until after the expiration of the appropriate notice period; and,
- includes works that cannot reasonably be severed from such works.

5.3 Provisional Advance Authorisations (PAAs)

5.3.1.1 In accordance with Regulation 11, the WaSP scheme requires a Provisional Advance Authorisation (PAA) to be sought for Major activities. A PAA is not required for activities classed as Minor, Standard or Immediate.

-
- 5.3.1.2 PAAs provide a mechanism for significant activities to provisionally 'book' road space prior to further planning and discussion between the activity promoter and the Permit Authority. They replace the NRSWA Section 54 Advance Notice.
- 5.3.1.3 A PAA may only contain one street or USRN.
- 5.3.1.4 All PAAs must comply with the definitive format and content of both paper and electronic permit applications given in the EToN technical specification or subsequent amendments. This includes the requirement that a copy PAA is sent to any interested parties or organisations as detailed within the authority's ASD (see section 5.4.4).
- 5.3.1.5 The PAA must be applied for not less than three months in advance of the proposed commencement date of those works or as agreed with the Permit Authority. An application for a PAA must always specify proposed start and end dates. However, as it may be difficult to be certain of the start date three months before the event, the proposed start date is regarded as provisional and may be amended in the application for a final permit.
- 5.3.1.6 A PAA must be followed-up by a full permit application within the required timeframes, as set out in table 1, section 7.1.
- 5.3.1.7 The information required in support of an application for a PAA is set out below. It is recognised that comprehensive information may not be known at this early stage however as much detail should be provided as possible to enable the Permit Authority to adequately assess the submission.
- location of activity
 - proposed start and end dates
 - an outline description
 - times of working, including hours of the day and any weekend provisions
 - the road space occupancy
 - method of working
 - traffic management
- 5.3.1.8 The Permit Authority must respond to an application for a PAA within one calendar month from the date the application is received by the Permit Authority. The response may either grant the PAA or refuse it, giving reasons (see Chapter 7).
- 5.3.1.9 The information contained within the PAA will provide confirmation as to whether the proposed activity has the potential to be especially disruptive to local residents, businesses or road users. In such circumstances, the Permit Authority will require the activity promoter to provide advance publicity as it deems necessary.
- 5.3.1.10 Where the Permit Authority decides that the activity promoter needs to provide additional information or undertake a publicity exercise prior to submission of the follow-up permit application, they will inform the activity promoter. This will be part of the ongoing planning and agreement process and the activity promoter will be required to provide this information or provide evidence of the publicity exercises undertaken as part of the conditions of the full permit application.
- 5.3.1.11 It is recognised that the dates and the detail of the PAA should be considered as provisional and should any of these details change significantly then the activity promoter must inform the Permit Authority of the changes as soon as possible.
- 5.3.1.12 A PAA cannot be varied, only resubmitted. The Permit Authority may therefore decide that a new PAA is required if the changes are significant. Alternatively, if the Permit Authority feels the changes are less significant then, these changes can be made as part of the full permit application.
-

- 5.3.1.13 In accordance with Regulation 11(5), the granting of the PAA does not guarantee that a Permit will be subsequently issued, particularly if the Permit Authority feels that the activity promoter has not provided suitable detail as noted in 5.3.1.7 or where dates have changed so significantly they clash with another activity.

5.4 Requirements for Permit Applications

5.4.1 *Timing of Permit Applications*

- 5.4.1.1 Table 1 in Section 7.1 provides minimum application timescales for PAAs and permit applications. Larger activities or those on strategically significant streets will have the potential to be more disruptive and therefore require a longer notice period to enable planning and coordination to take place.
- 5.4.1.2 Permits will include conditions under which the activity may take place so it is in the best interests of the activity promoter to contact the Permit Authority early to enable full discussions to take place. Early applications will improve the coordination process, enable the Permit Authority to better manage the activities taking place on the highway and assist the activity promoter in better planning their activities.

5.4.2 *Method of Making Permit Applications*

- 5.4.2.1 All permit notifications, including PAAs, permit applications and variations, must be made electronically and must comply with the EToN technical specification.
- 5.4.2.2 The Permit Authority may accept non-EToN applications from activity promoters who are unable to meet the requirements for EToN transactions, for instance when their electronic systems are unavailable, or for one off promoters. In these cases, applications and notices must comply with the EToN technical specification and may be submitted by email, fax or post on agreement with the Permit Authority.
- 5.4.2.3 Applications and notifications may be given by email, fax or post to those recipients who expect copies of such notifications but do not have access to EToN, e.g. transport authorities, emergency services or frontagers.
- 5.4.2.4 Where there is an EToN system failure by either the activity promoter or the Permit Authority, an alternative strategy must be implemented as noted in section 5.8.

5.4.3 *Content of Permit Applications*

- 5.4.3.1 All applications must comply with the definitive format and content of both paper and electronic permit applications given in the EToN technical specification.
- 5.4.3.2 To ensure that information made publicly available can be understood by the general public the description of activities and other information should be in plain English with minimal industry specific jargon.
- 5.4.3.3 The Permit Authority will actively encourage industry-wide standard durations of routine activities which will be developed by the Working Group and referenced in the WaSP scheme Operational Guidance.
- 5.4.3.4 Each application must contain information about activities in only one street. To improve co-ordination, projects covering more than one street must cross-reference all related applications. This is particularly important when applying for PAAs. Under no circumstances will an application containing activities in more than one street be acceptable.
- 5.4.3.5 Where an activity or project crosses the boundary between authorities the works promoter must submit the relevant notices or permit applications to each authority. Early discussion with both authorities will help avoid conflicting requirements.

5.4.3.6 Where it is anticipated that an activity may affect the network of a neighbouring authority then the activity promoter should consider this when planning the activity and ensure that this authority is also engaged early on in the planning process. Early discussion with both authorities will help avoid conflicting requirements.

5.4.3.7 All permit applications relating to a PAA should be cross-referenced so that the Permit Authority is able to consider all applications and coordinate the activities together.

5.4.4 Applications involving other Interested Parties

5.4.4.1 Any undertaker, authority or relevant body or organisations who wish to be informed about any activities on a street should ensure their interest is entered in the street authority's ASD (see appendix D) against that street. Promoters must ensure that any such interested parties are copied in on all PAAs, PAs, variations and notifications. Similarly, the Permit Authority must ensure that a response to a permit application will be copied in to these parties.

5.4.4.2 Electronic systems meeting the EToN technical specification should deal with this automatically. However, some interested parties may not have access to the electronic systems so they should be sent copies by an alternative method such as email or fax.

5.4.4.3 The Permit Scheme Regulations amend NRSWA Section 88, 89 and 93. Together with sections 90 and 91, these deal with notifications to bridge, transport and sewer authorities to ensure that consultation takes place on streets with structures and other special engineering difficulties (as described in the authority's ASD).

5.4.4.4 Promoters must ensure that they gain approval to plans and Sections as detailed in Appendix D of the *Code of Practice for Permits* before applying for a permit and state that they have fulfilled the requirements of these Sections in their applications.

5.4.4.5 The consultation requirements with Network Rail are as set out in Appendix C of the *Code of Practice for Permits*.

5.4.5 Permit Start and End Dates

5.4.5.1 A permit will allow an activity to be carried out between the start and end date (in calendar days) given on the permit and that the duration of the works will be reflected in the permit conditions. This allows an activity to be carried out on weekends or Bank Holidays.

5.4.5.2 A promoter working outside the permit dates would not have a valid permit and potentially would be committing an offence. It should be noted that if the permit should start on a Monday and finish on a Friday, the subsequent weekend cannot be used as additional days without the express approval of the Permit Authority through a permit variation.

5.4.5.3 However in other respects the duration and reasonable period of the activity remains operating on working days, as defined in the Permit Scheme Regulations . On strategically significant streets, the duration of the activity will exactly match the time from the start date to the end date excluding any non-working days between the two dates.

5.4.5.4 It follows that it is possible that for the purposes of Section 74 that the reasonable period and the permit end dates do not coincide.

- 5.4.5.5 An activity promoter working beyond the agreed reasonable period will therefore be subject to Section 74 overrun charges, even if the Permit Authority has granted a permit extension to allow works to be completed where the Permit Authority does not agree with the reasons for extending the works duration (see also section 8.2.3).
- 5.4.5.6 On strategically significant streets, where an activity promoter identifies in advance that an activity cannot begin on the permit start date then the activity promoter must contact the Permit Authority on the previous day, by a means specified by the Permit Authority on its website or within the WaSP scheme Operational Guidance.
- 5.4.5.7 For some activities on strategically significant streets where an activity is delayed on the permit start date, the activity promoter should contact the Permit Authority as soon as possible on the due start date so that the Permit Authority can put into place any additional or mitigating actions it considers necessary.
- 5.4.5.8 The promoter may decide they are able to begin the activity on a subsequent day, submitting the Section 74 Actual Start notice. However, there is no automatic extension to the permit or the reasonable period in these circumstances and the end date remains the same unless an agreement is reached between the activity promoter and the Permit Authority, and a permit variation is granted (see chapter 8).
- 5.4.5.9 On non-strategically significant streets a permit will be issued with a start and end date, with the duration (in working days) for the activity set as a condition. Because of the nature of these types of street, the start date will be estimated and there will be a window of opportunity for the works to being equivalent to the validity period of NRSWA notices:
- 5 days for major and standard activities
 - 2 days for minor activities
- 5.4.5.10 Once the works commence and a Section 74 Works Start notice is submitted the permit end date will adjust to take into account the actual start date and the previously agreed reasonable period and permit duration.
- 5.4.5.11 In both cases above, if the activity promoter could not complete the activity before the permit end date, they must apply for a permit variation to extend the permit. This would be required even if the extra days were at a weekend (a permit expires at midnight). The Permit Authority may or may not agree to an extension of the reasonable period, depending on the circumstances, and the activity promoter may be subject to over-run charges under Section 74.

5.4.6 Non-working Days

- 5.4.6.1 If the impact or duration of an activity can be lessened by extending works on site into weekends and bank holidays then promoters are actively encouraged to consider these possibilities. The WaSP scheme authorities will make a general policy available as part of the WaSP scheme Operational Guidance for such situations and will proactively seek opportunities to lessen road occupancy.
- 5.4.6.2 In such situations, conditions will be placed on the permit to define when such works may take place and any other constraints as deemed necessary by the Permit Authority (see chapter 6).

5.4.7 Early Starts

- 5.4.7.1 An activity must not start before the expiry of the application period except where an early start has been agreed with the Permit Authority.

- 5.4.7.2 The Permit Authority will consider a promoter's request for an early start and such a request will not be unreasonably refused. An early start must be applied for in the manner requested by the Permit Authority as detailed in the WaSP scheme Operational Guidance. This may be via an initial phone call or email, or directly via EToN.

5.4.8 Actual Start Notification (Section 74)

- 5.4.8.1 Once the activity has begun, a Notice of Actual Start of an activity must be given by 10.00am the next working day on strategically significant streets and by the end of the next working day in the case of non-strategically significant streets.
- 5.4.8.2 In the case of an Immediate activity the permit application will be taken as the actual start date notice as it is made after the activity has commenced, and the status should always be "In Progress".
- 5.4.8.3 Notice of Actual Start must be given in accordance with the requirements described in the EToN technical specification. The identity of the main contractor or, if appropriate the Direct Labour Organisation (DLO) must be provided on the actual start date notice. This should always be the organisation with whom the undertaker has the contract, and not any subcontractor who may be actually carrying out the activity.

5.5 Content of a Permit Application and Provisional Advance Authorisation

- 5.5.1.1 In deciding whether to include any conditions in a permit, the Permit Authority will consider the information that has been provided in support of the application.
- 5.5.1.2 The EToN specification provides detail on the required fields to be submitted as part of a permit application. Additional information or constraints will be provided as part of the condition text.
- 5.5.1.3 The Permit Authority recognises that full information may not be fully known at the time an application for a Provisional Advance Authorisation is made. However, activity promoters should make every effort to provide the most accurate information available at each stage.

5.5.2 Reference Number

- 5.5.2.1 Each application must include a unique reference number. Details of the numbering system are given in the Technical Specification for EToN.

5.5.3 Description of Activity

- 5.5.3.1 This should be a comprehensive description of what the activity is and its purpose to allow the Permit Authority to assess the likely impact. This must include
- Detail on the works being undertaken
 - Description of methodologies employed
 - A description of the layout and impact of the activity (for example traffic management)
 - Details of any collaborative working; such as details of the other promoters and brief descriptions of the activities being undertaken
 - Any other information pertinent to that activity
- 5.5.3.2 To ensure that information made publicly available can be understood by the public the description of activities and other information should be, within reason, in plain English with minimal industry specific jargon.

5.5.4 Location of Activity

- 5.5.4.1 An accurate location must be provided based on Ordnance Survey National Grid References (NGRs). For a small excavation or opening then a point NGR should be provided. Where a trench is longer than 10m then a polyline or a polygon feature must be provided as described in the EToN technical specification.
- 5.5.4.2 The location must have a textual description that should match the NGR provided.

- 5.5.4.3 The street must be given based on the unique street reference number (USRN) provided in the street gazetteer as defined by the National Street Gazetteer Concessionaire. Each permit may only contain one street.
- 5.5.4.4 Where the activity is likely to cause significant disruption a description of the space taken up by the activity should be provided. The Permit Authority may request additional information such as a traffic management plan or schematic to show the site footprint.
- 5.5.4.5 Promoters applying for Immediate activities should do so within two hours of starting work. The location should reflect where the activity is actually taking place. If the location then changes a permit variation must be obtained (see Section 8.2.5).

5.5.5 *Timing and Duration*

- 5.5.5.1 The proposed permit start and end dates (in calendar days) will clearly define the time period an activity will take up road space.
- 5.5.5.2 Where the street is traffic-sensitive, details of the times of day the activity is to be carried out must be provided, including any proposal to work at night.
- 5.5.5.3 Details must be provided where the activity promoter proposes to undertake activity on weekends or Bank Holidays to speed up the activity or reduce disruption.
- 5.5.5.4 These constraints on the activity will be submitted as conditions and will be taken into consideration by the Permit Authority.

5.5.6 *Illustration*

- 5.5.6.1 An illustration may be required for any activity where the Permit Authority considers that the disruption caused by the activity may be significant.
- 5.5.6.2 An illustration must include details of the activity and location of utility apparatus, the extent of the highway occupancy and if requested by the Permit Authority a disruption effect score as set out in Appendix E. This additional information may be in the form of sections, photographs, traffic management drawings and any other relevant material. The illustration must cover the entire area of the activity including areas used for storage of materials, parking of vehicles, coned areas and so on. In combination, all of this material will be referred to as the traffic management plan.
- 5.5.6.3 Activities on those streets, or parts of a street, subject to a Special Engineering Difficulty designation will require a plan and section.
- 5.5.6.4 The illustration should be submitted to the Permit Authority in whatever form specified by the Permit Authority in the WaSP scheme Operational Guidance or the current EToN technical specification.
- 5.5.6.5 If required for Major works, an illustration of the activity should be provided at or prior to the permit application stage. It is expected that this will be part of the PAA planning process or the discussion resulting from a PAA submission.

5.5.7 *Methodology*

- 5.5.7.1 Details of the proposed techniques, such as open cut, trench share, minimum dig etc. must be provided as part of the works description.

5.5.8 *Traffic Management and Temporary Traffic Regulation Orders*

- 5.5.8.1 The EToN specification requires certain types of traffic management or traffic control to be indicated on the permit application. Certain traffic management proposals will also require suitable conditions detailing the constraints on these proposals.

- 5.5.8.2 The activity promoter must supply details of traffic management proposals together with any requirement for action by the local authority or others such as
- A need for a Temporary Traffic Regulation Order (TTRO)
 - Lifting of parking restrictions
 - Approval for temporary traffic signals (TTS)
 - Suspension of bus stops
- 5.5.8.3 Section 13.1 details the processes for applying for a TTRO, and provides further information on other traffic management requirements and related matters, including agreements on the use of temporary traffic signals. The WaSP scheme Operational Guidance provides further information on these aspects as well as other dispensations or requirements
- 5.5.8.4 The extra time required for gaining these approvals need to be taken into account by the activity promoter. They must be referred to when submitting a PAA or included in the permit application.
- 5.5.8.5 Additional costs associated with these are not included within the scope of this permit scheme.

5.5.9 Depth

- 5.5.9.1 Activity promoters must provide their best estimate of the excavation depth. While this might be expressed as a range, it should nonetheless provide a meaningful indication of the nature and extent of activity involved if it is expected that an excavation will be deeper than 1.5metres.

5.5.10 Reinstatement Type

- 5.5.10.1 The application must indicate whether the activity will be completed with interim or permanent reinstatement or a mixture of both. If it is the latter, then promoters must provide details as to where interim or permanent reinstatements will be completed within that permit.
- 5.5.10.2 The EToN technical specification details the use of the 'number of phases' data element which is used to describe this.
- 5.5.10.3 In some cases the Permit Authority may require one or other reinstatement method to be undertaken specifically for that activity, in which case a suitable condition will be applied.

5.5.11 Inspection Units

- 5.5.11.1 The application must state the provisional number of estimated inspection units appropriate to the activity, in accordance with the rules laid down in the Inspections Code of Practice and *The Street Works (Inspection Fees) (England) (Amendment) regulations 2004*. Where there is trench sharing, only the primary promoter is required to give the inspection units (see section 3.4.3).

5.5.12 Contact Person

- 5.5.12.1 The application must include the name and contact details of the person appointed by the activity promoter to deal with any problems that may occur during the activity, including any provision made by the activity promoter for out-of-hours contact.
- 5.5.12.2 On permit applications (and on PAAs if the information is known at the time) the application should include the name of the main contractor carrying out the activity. This will help with the Permit Authority's consideration of the application and with any discussions that need to take place before the permit can be issued.

5.5.13 Proposed Conditions

- 5.5.13.1 Where there are constraints in the permit application, it must include conditions that specify in detail the activity and support the application. These conditions are based on the Statutory Guidance for Permit Conditions. See also chapter 6.
- 5.5.13.2 Where the Permit Authority considers necessary it will also request that certain conditions be added to the application before issuing the permit.
- 5.5.13.3 Permit conditions might be applicable to any activity.

5.6 Phasing and Multiple Activities

- 5.6.1.1 A phase of an activity is a period of continuous occupation of the street (whether or not work is taking place for the whole time) between the start and completion of the works.
- 5.6.1.2 One permit can only contain one phase and the dates given in a permit application will denote the dates for that phase. A phase can end only when all the plant, equipment and materials, including any signing, lighting and guarding have been removed from the site.
- 5.6.1.3 The promoter must clarify that an activity is to be carried out in more than one phase on the application (see section 5.5.10.2).
- 5.6.1.4 Phased activities must relate to the same works. These could be single or multiple-but-linked excavations, or a trench dug progressively along the street as part of a continuous operation, or where a permanent reinstatement or remedial works are undertaken at a later date.
- 5.6.1.5 Linked activities carried out at separate locations in a street must be treated as belonging to the same set of works. However, unconnected activities carried out by the same promoter in one street should not be treated as parts, or phases, of a single set of works.
- 5.6.1.6 Each phase will require a permit and the same activity reference must be used for all phases, or cross-referenced to the other phases. If the works are classed as Major they will also require a Provisional Advance Authorisation, except in the case of remedial works see Section 5.6.6. Each phase will be classed as a separate activity or works, for the purposes of NRSWA (for instance Section 74, guarantee periods etc).

5.6.2 Cross Boundary Activities

- 5.6.2.1 Where an activity or project crosses the boundary between authorities the works promoter must submit the relevant notices or permit applications to each authority. Early discussion with both authorities will help avoid conflicting requirements.
- 5.6.2.2 Where it is anticipated that an activity may impact the network of a neighbouring authority then the activity promoter should take this into consideration when planning the activity and ensure that this authority is also engaged early on in the planning process. Early discussion with both authorities will help avoid conflicting requirements.

5.6.3 New Customer Connections

- 5.6.3.1 A new main or cable run, which includes new customer connections, can be classed as one activity or phase if all the work is completed in a single occupation of the street. Otherwise, a new permit must be obtained for the different stages.

5.6.4 Projects

- 5.6.4.1 Activities involving more than one street could form part of one project in management and contractual terms but separate permits and Provisional Advance Authorisations will be required for each street. The EToN technical specification allows for project references, activity references and phase types.

5.6.5 Interim to Permanent Reinstatements

- 5.6.5.1 When an activity is completed with an interim reinstatement then the activity will be regarded as having more than one phase and a new permit must be obtained for the permanent reinstatement phase. The same works reference number must be used ("cross referenced" to the original activity).

5.6.6 Remedial Works

- 5.6.6.1 Remedial works will require a new permit to be obtained for the remedial phase. The same works reference number must be used as the original activity ("cross referenced" to the original activity).
- 5.6.6.2 Where remedial works fall within the definition of Major works, a Provisional Advance Authorisation will not be required.
- 5.6.6.3 Where remedial works fall within the definition of 'immediate' or are required to remedy dangerous defects, the activity will be categorised as Immediate.

5.6.7 Severable Works

- 5.6.7.1 The definition of emergency works in Section 52 of NRSWA provides that items of work which "cannot be reasonably severed" from the emergency works are regarded as part of them. The same test applies to urgent works.
- 5.6.7.2 Work which can be "reasonably severed" from the immediate activity must therefore be regarded as separate activities and classified accordingly.
- 5.6.7.3 Typically, immediate activities shall consist only of a repair to end the emergency, or restore the service, and complete the necessary reinstatement. Follow-up activities undertaken to provide a permanent solution are "severed" and subject to a separate permit application.
- 5.6.7.4 If the activity promoter leaves site after dealing with the immediate problem, including carrying out an interim reinstatement and closing down the site, and returns later for further activities - it is clear that these are "severed".

5.6.8 Interrupted Activities

- 5.6.8.1 There may be circumstances where a promoter is unable to complete their activity in one phase as originally intended. This may be due to difficulties that could not have been reasonably foreseen, for instance adverse weather conditions or an engineering complication. The promoter should contact the Permit Authority immediately this becomes apparent.
- 5.6.8.2 If the Permit Authority is content for the excavation to remain open then a permit variation will be required to extend the current permit. It should be noted that the Permit Authority may not consider the reason for the extension to be acceptable and may not extend the 'reasonable period'; the activity would therefore be subject to Section 74 overrun charges (see Chapter 10).
- 5.6.8.3 If the Permit Authority wishes the excavation to be closed down, reinstated, and returned to use then agreement should be sought with the Permit Authority on the timing of the subsequent permit to complete works at a later date.

- 5.6.8.4 Whenever an activity is interrupted, the activity promoter must first agree a way forward with the Permit Authority before starting any of the processes above. Failure to do so may result in the Permit Authority treating the subsequent application as an illegitimate use of activity phases (see section 8.2.4).

5.6.9 Third Party Damage

- 5.6.9.1 If the activity is interrupted because the activity promoter, or his contractor, has caused third party damage, then it is the activity promoter's responsibility to seek the authority's approval to a variation to allow the damage to be repaired by the owner of the apparatus.
- 5.6.9.2 In the interests of good practice, a permit is required by the third party while they are undertaking these works to help the Permit Authority identify that another party is working at this location. This permit will not be chargeable and nor will Section 74 charges apply to the third party.
- 5.6.9.3 However, the normal notifications and timing rules still apply to the permit application although in the interests of expediency an 'early start' should be requested for the subsequent permit application and the activity promoter is expected to complete the repairs without unreasonable delay (see Chapter 8).
- 5.6.9.4 The activity site and the reinstatement remains the responsibility of the original promoter, unless this is agreed otherwise between all activity promoters and the Permit Authority, until it is able to clear site and issue a Works Stop notification.

5.7 Section 58 Restrictions on Further Activities

- 5.7.1.1 The powers to restrict further works in all or part of a street following substantial road or street works (NRSWA Section 58 and 58a respectively) apply to streets covered by the WaSP scheme.
- 5.7.1.2 The Permit Authority will exercise its powers under these Sections in accordance with the guidance given in chapter 8 of the Code of Practice for Permits.

5.8 EToN System Failures

- 5.8.1.1 Where there is a failure of the Permit Authority or a promoter EToN system, the Permit Authority will implement an interim alternative strategy for managing permit applications, variations, responses and other notifications to ensure that workflows are not unduly interrupted. This procedure is detailed in the WaSP scheme Operational Guidance.
- 5.8.1.2 All applications and notifications must be resubmitted through EToN following recovery of service. Promoters must ensure that all resent notices are sequenced correctly as detailed in the EToN technical specification.

6 Conditions

6.1 General Principles

- 6.1.1.1 The permit must specify the activity it allows in detail. Any other limits or constraints on the activity will be reflected in permit conditions as provided for in Permit Scheme Regulations 10.
- 6.1.1.2 The conditions of the WaSP Scheme will be those set out within the Statutory Guidance for Permit Conditions. The conditions may be applicable to any activity. It is for the activity promoter to supply the required conditions as part of their permit application or permit variation.
- 6.1.1.3 The Statutory Guidance for Permit Conditions contains conditions that will be applied to all permits, or permits for certain kinds of activity in all cases. The WaSP scheme does not require these conditions to be attached to the permit as they are considered to be applied to the permit.
- 6.1.1.4 For expediency and in consideration to EToN character constraints, when using conditions from the Statutory Guidance for Permit Conditions it is required for the promoter to apply to entire condition text, instead the relevant shorthand text contained within the Statutory Guidance for Permit Conditions may be applied with any required constraints or necessary detail.
- 6.1.1.5 Where the Permit Authority considers it necessary and appropriate to apply conditions that differ from the proposals in the application, then the Permit Authority will either refuse the permit or request a modification (see section 7.1.3), stating the reasons for this. The promoter may then decide whether to reapply for a permit or invoke the dispute procedure with the Permit Authority as detailed in Chapter 12.
- 6.1.1.6 If the Permit Authority considers that an activity promoter is failing to comply with the conditions of a permit, then it may revoke the permit. Before revoking a permit, the permit authority will contact the activity promoter to warn them of its intention and discuss the situation.
- 6.1.1.7 Failure to comply with conditions may leave the activity promoter liable to criminal prosecution. Information about appealing against conditions the activity promoter considers unreasonable is set out in Chapter 12.

6.2 Timing and Duration of Activity

- 6.2.1.1 It may be considered necessary and appropriate to limit the days and times of day when an activity may be carried out. In these cases, a Permit Condition for a date or time constraint will be attached to the permit. Scenarios include, but are not limited to: -
- to maintain traffic lanes during peak periods the site may only be occupied
 - between certain times on certain days;
 - to limit activities that might affect an event on the public highway;
 - to restrict works on weekends or bank holidays
- 6.2.1.2 These conditions may also be used to formalise extended and out of hours work patterns. For instance, if there has been an agreement to carry out an activity in the evening or at night, or that an activity must take place, or is prohibited, at any time on weekends and Bank Holidays.

6.3 Road Space

- 6.3.1.1 The amount of space that activities in the highway occupy can have a major impact on congestion and disruption levels. Equally, the impact of a relatively small activity could be magnified considerably if associated plant and excavated material take up a substantial area, possibly resulting in lane restrictions and temporary traffic control.
- 6.3.1.2 The WaSP scheme authorities should recognise that any conditions relating to the area of occupancy have to be realistic and allow for the activity to be carried out in compliance with statutory guidance and codes of practice, especially in relation to safety, and within the restrictions imposed by the available industry resources and technical capabilities.
- 6.3.1.3 Where a traffic management plan or illustration is required, a Permit Condition will be attached in order to reference this. Such an illustration may also include locations of where materials and plant are to be stored on site as well as the wider traffic management or site footprint (see section 5.5.6).
- 6.3.1.4 For an Immediate activity, the works area may be agreed after the works have started on site. Where changes to the site are agreed, these must be implemented within an agreed timeframe and a permit application with the relevant condition must be submitted as soon as practicable, but no later than 10:00am on the next working day.
- 6.3.1.5 Where disruption can be minimised by the removal of both plant and/or materials that are unnecessary then a Permit Condition for a material and plant storage constraint will be applied. The conditions should only be used where the storage of the materials and/or plant may cause problems on site or impede traffic unnecessarily.
- 6.3.1.6 The Permit Authority may impose a Permit Condition after an activity has begun if it becomes clear that the site requires more space than anticipated, or is being managed in a way that is detrimental to the network operation. In these cases the activity promoter must comply with the Authority Imposed Variation (see section 8.3) or the Permit Authority may use its provisions under Regulation 18.
- 6.3.1.7 The activity promoter should note that if the works are likely to impede other highways operations such as gritting or rubbish collection then a relevant Permit Condition should be used to identify how this will be managed.

6.4 Traffic Management Provisions

- 6.4.1.1 The way traffic is managed during an activity can have a major influence on congestion and disruption.
- 6.4.1.2 Activity promoters should use a Permit Condition to reference any traffic management plans or illustrations as detailed previously.
- 6.4.1.3 There may be occasions where additional approvals are required and a Permit Condition should be used to reference these. This includes, but is not limited to: -
- relevant approvals for bus stop suspensions;
 - agreements for the use of temporary traffic signals. It should be noted that all use of temporary traffic signals require the approval of the Authority (see section 13.11);
 - a Temporary Traffic Regulation Order or Notice in order to close a road or section of a road, or to restrict traffic (Section 13.1);

- 6.4.1.4 Any applicable reference number should be quoted in the condition if approval has been gained.
- 6.4.1.5 It is not necessary to have gained the approval of the relevant authority prior to submission of the permit application, and the permit should not be refused unreasonably. However it is necessary to have these approvals in place prior to commencement of the activity otherwise the activity promoter may be committing an offence.

6.5 Methodology

- 6.5.1.1 It is accepted that the Permit Authority may not be in a position to make an engineering judgement on the methodology employed by the activity promoter. However, under its duties to minimise congestion and disruption the Permit Authority must be satisfied that the methodology employed is best able to mitigate against disruption and inconvenience as well as taking into account the practicalities of working and safety.
- 6.5.1.2 Where there is an agreement for a specific manner in which the activities are to be carried out (typically where the method is not the normal way of working), then condition a Permit Condition for a work methodology constraint may be applicable.

6.6 Consultation & Publicity

- 6.6.1.1 It is likely that many Major activities, particularly those with durations of 11 days or more, will require comprehensive publicity and consultation.
- 6.6.1.2 The timescales involved in Major works should allow much of this to take place during the PAA stage. A provisional condition will be attached to the PAA and on submission of the permit application, the activity promoter will provide evidence that this has taken, or is taking, place and this will be reflected in a Permit Condition for a consultation and publicity attached to that permit.
- 6.6.1.3 Where non-major activities have the potential to be especially disruptive to local residents, businesses or road users, the Permit Authority may expect the activity promoter to provide advanced notice to nearby households or businesses or to provide advance signs for traffic. A Permit Condition for a consultation and publicity constraint should be used to reference these agreements and requirements.
- 6.6.1.4 Where applicable, the Permit Authority will provide details within their ASD of which council departments or external organisations need to be consulted with before the activity can take place at a particular section of street.
- 6.6.1.5 Organisations that may require consultation with include, but are not limited to: -
- the Environment Agency
 - English Heritage
 - the Ministry of Defence
 - Network Rail
 - other departments of the Permit Authority such as the arboricultural department, Environmental Health, or traffic signals departments.
- 6.6.1.6 The Permit Authority will provide assistance and advice to the activity promoter on what agreements or assurances are needed, however the activity promoter remains responsible for obtaining them.

- 6.6.1.7 It is not necessary to have gained the approval of the relevant authority prior to submission of the permit application, and the permit should not be refused unreasonably. However, it is necessary to have these approvals in place prior to commencement of the activity otherwise the activity promoter may be committing an offence.
- 6.6.1.8 The effect of planned activities to a Public Transport provider, such as bus company, has to be taken into account when the Permit Authority considers the permit application. These providers require consultation on the planned works to provide alternative services in order to minimise the impact of works. A Permit Condition for a consultation and publicity may be used to reference the agreements reached.

6.7 Environmental Conditions

- 6.7.1.1 Where the disturbance from noisy work is likely to be substantial, the Permit Authority must take into account local factors, such as businesses, schools, hospitals etc, when agreeing what hours an activity may take place. In these situations the type of works taking place at any point during the activity may need to be limited to certain times, for instance ensuring the noisy element of an activity only takes place during part of the day.
- 6.7.1.2 In such cases, a Permit Condition for an environmental constraint should be used to limit the environmental impact. The activity promoter may be required to contact the authority's Environmental Health Officers to agree the proposals, and a Permit Condition will be attached as described in the previous section.
- 6.7.1.3 Where trees are affected by an activity proposal, the activity promoter must contact the Permit Authority's arboriculture department. Any requirements they have must be referred to in the application and reflected in a Permit Condition for an environmental constraint.
- 6.7.1.4 In general, this applies to excavations within the tree 'prohibited' zones, as defined in NJUG Publication Volume 4 NJUG Guidelines for the Planning, Installation and Maintenance of Utility Apparatus in Proximity to Tree. However, it is good practice to seek advice from the Permit Authority when undertaking an activity within the 'precautionary' zone.

6.8 Conditions for Exceptional Circumstances

- 6.8.1.1 There may be circumstances where the Permit Authority require a specific condition to be added to a permit that is not defined with the Statutory Guidance for Permit Conditions.
- 6.8.1.2 In such circumstances, which by their nature will be exceptional, the Permit Authority will follow the Statutory Guidance for Permit Conditions for the application of this condition.
- 6.8.1.3 Where circumstances require the regular application of a specific condition the Permit Authority, at agreement with the Promoter, may include this condition within the Authority Addendum, as a local condition, with a description of practical use in the WaSP Scheme Operational Guidance. The purpose of this would be to ensure a consistent application and use of this condition.

6.9 Permit Conditions attached to Highway Works

- 6.9.1.1 Conditions may be imposed on all permits, regardless of promoter.

- 6.9.1.2 Regulation 10(3) allows the Permit Authority to attach a condition to a permit in respect of works to be carried out by or on behalf of a highway authority, requiring the highway authority to consult with any person who has apparatus likely to be affected by the permit works. This condition will be applied to all permits for all highway authority works.
- 6.9.1.3 In these instances, the Permit Authority will require the highway authority and its contractor to take all reasonably practicable steps to comply with any requirement made by that person which is reasonably necessary for the protection of the apparatus or for securing access to it.

6.10 Conditions Placed on Immediate Activities

- 6.10.1.1 Immediate activities are by definition emergency or urgent and therefore may commence without a permit being in place.
- 6.10.1.2 Regulation 13 provides for the WaSP scheme to impose conditions on an activity that is not the subject of a permit, effectively the period of time between an Immediate activity starting on site and the issuing of the permit.
- 6.10.1.3 An application for Immediate activities must be given within two hours of the activity starting or in the case of the activity taking place out of normal working hours, within two hours of the commencement of the next working day.
- 6.10.1.4 At any stage of an Immediate activity, where the activity promoter requires the use of temporary traffic signals or to shut a street that is designated within the authority's ASD as one where "early notification of Immediate Activities is required", the activity promoter should contact the Permit Authority prior to implementing these traffic management provisions.
- 6.10.1.5 Section 13.9 provides further detail on emergency traffic management measures.
- 6.10.1.6 It is accepted that for Immediate activities, very little may be known about the location of the activity prior to attendance on site. The activity promoter should make every effort to supply additional conditions if required, based on the information provided from site.
- 6.10.1.7 These conditions should be submitted as soon as reasonably practical, but in any event within 24 hours of the activity starting on site, or by the end of the first working day following commencement of the activity where this takes place on a weekend or bank holiday. The Operational Guidance will provide more detail on the timeline for this requirement.
- 6.10.1.8 The Permit Authority may impose conditions on Immediate activities where it feels necessary to do so. The imposition of such conditions will be reasonable, and based on the Permit Authority's knowledge of a particular location or area and the implications such an activity might have on the network or for safety. The activity promoter must submit a permit variation within two hours reflecting the imposed conditions.
- 6.10.1.9 For an immediate activity, the works area may be agreed after the works have started on site. Where changes to the site are agreed, these must be implemented within an agreed timeframe and a relevant Permit Condition must be added to the permit as soon as practicable but no later than 10:00am on the next working day.
- 6.10.1.10 Prior to the issuing of a permit for Immediate works, the activity promoter must work within the terms and conditions supplied in its original application.

- 6.10.1.11 Where other approvals might be required (for instance bus stop suspensions, TTROs etc) then these should be submitted as soon as reasonably possible. This will ensure that the Permit Authority is fully aware of potential problems at that location, and is able to give advice and assistance quickly and effectively and to ensure that the activity promoter acts responsibly and is not undertaking an activity without the required approvals and a Permit Condition may be required retrospectively to reference these approvals.

7 Issuing a Permit and other Responses

7.1 Permit Responses

7.1.1.1 In accordance with Regulation 16, the Permit Authority will respond to all permit applications within the timescale set out in table 1 below. A response corresponds to an EToN notification of Grant Permit or Refuse Permit or Permit Modification Request, or any other required future EToN notification.

7.1.1.2 Any Permit Authority operating the WaSP scheme must act reasonably in reaching decisions with respect to applications for a permit. In particular, they will consider whether issuing the permit will accord with their statutory duties to co-ordinate and to manage the network and the objectives of the WaSP scheme.

ACTIVITY TYPE	Minimum application periods ahead of proposed start date		Minimum period before permit expires for application for variation (including extension)	Response time for issuing a permit or seeking further information or discussion		Response time for responding to applications for permit variations
	PAA	PA		PAA	PA	
Major	3 months	10 days	2 days or 20% of the original duration whichever is the longer	1 calendar month	5 days	2 days
Standard	N/A	10 days		N/A	5 days	
Minor	N/A	3 days		N/A	2 days	
Immediate	N/A	2 hours after		N/A	2 days	
Notes: “days” in the above table refer to working days, as defined in NRSWA and the Permit Scheme Regulations.						
These timescales may be subject to amendment by legislation						

Table 1: application and response times

7.1.2 Issuing a Permit

7.1.2.1 If the Permit Authority is content that all the information contained in the application meets an acceptable standard of detail to enable it to consider fully the impact of the activity and the suitability of the timing and methodology and any conditions attached to the application, it will issue a permit by way of a Grant Permit EToN notification.

7.1.2.2 Each permit issued will be given a unique reference number. Details of the numbering system are given in the Technical Specification for EToN.

7.1.3 Amending a Permit Application

7.1.3.1 If it is necessary to seek further clarification of the information contained in the application then the Permit Authority will endeavour to resolve this within the mandatory response times so that the estimated start date and duration of the original application remains.

- 7.1.3.2 The Permit Authority should submit a Modification Request EToN notification to allow the activity promoter the opportunity to make amendments to their application and resubmit this within the required timeframe.
- 7.1.3.3 As long as the timeframes are met, the original start and end dates of the first application can be kept and no early start agreements are required.
- 7.1.3.4 If the matter cannot be resolved satisfactorily within the timeframes or the response period then the Permit Authority will refuse the application.
- 7.1.3.5 If the Modification Application is not subsequently submitted within the required timeframes then in accordance with Regulation 16(3) the Permit Authority will consider the application refused.
- 7.1.3.6 The EToN technical specification sets out the requirements and timelines in more detail.

7.1.4 Refusing a Permit

- 7.1.4.1 A Permit Authority cannot refuse legitimate activities. However if the application does not contain the required information to the satisfaction of the Permit Authority then the Permit Authority will refuse the permit by way of a Refuse Permit EToN notification.
- 7.1.4.2 A Refused permit must clearly detail the reasons for refusal so that the activity promoter is able to amend their subsequent application.
- 7.1.4.3 Where an application has been refused and the activity promoter is able to submit a suitably amended application that requires an 'early start' (see also section 5.4.7) to maintain the original requested time slot, the Permit Authority will endeavour to agree the same start date. However, this is at the discretion of the Permit Authority being confident in the amended application and that there is no subsequent conflict with another activity. The activity promoter should follow the 'early start' procedure as detailed in the WaSP scheme Operational Guidance.
- 7.1.4.4 Where other activities are scheduled to take place in the same street, or other streets affected by the proposed activity at the same time, the Permit Authority may refuse a permit for the period requested but propose to grant it for different times. The refusal should clearly state a suitable timeframe, or invite the activity promoter to contact the Permit Authority to discuss acceptable options before applying for a new permit.
- 7.1.4.5 The WaSP scheme Operational Guidance contains information on refusals and sets out to provide a common framework for refusing applications across the WaSP scheme, including the use of standardised refusal texts.

7.1.5 Deemed Permits

- 7.1.5.1 When the Permit Authority fails to respond within the required timescales, or where for technical reasons the response does not reach the activity promoter within the required timescales, that permit is considered to be deemed to be granted.
- 7.1.5.2 In these situations, the activity promoter is at liberty to continue to undertake their activity in line with their original permit application. However, the activity should not take place in a manner different to that intended by the original application and indicated by the permit content and proposed conditions.

- 7.1.5.3 When it becomes apparent to the Permit Authority that a permit has deemed, then it is good practice for the Permit Authority to consider the permit as it stands and contact the relevant activity promoter if it becomes clear that the activity should not proceed as detailed. This might be because the conditions or the contents of the application itself are insufficient, or where a conflict between activities is likely, or where the activity is likely to cause considerable disruption that could be mitigated through discussion and changes.
- 7.1.5.4 In these cases, the activity promoter should discuss and agree any changes required by the Permit Authority. The fee for the variation, or cancellation and resubmission, to that original deemed permit should be waived by the authority.

7.2 Right of Appeal

- 7.2.1.1 The promoter has a right of appeal, detailed in Chapter 12, if it is unable to reach agreement with the Permit Authority over the terms it requested or the conditions attached. In the case of Immediate activities it may be that work has to stop until the issues are resolved.

8 Variations to Permits

- 8.1.1.1 Changing circumstances, for either an activity promoter or an authority, may require permits and/or the conditions attached to them to be varied. This might be because of a changing situation on site, or unexpected events affecting the network requiring a reconsideration of the way the activity is being carried out.
- 8.1.1.2 Regulation 15 provides for the WaSP scheme to allow permit variations. Variations to a permit need to be made before the permit expires or passes its end date. The method and content of applying for a Variation notification are detailed in the ETon technical specification.
- 8.1.1.3 As set out in section 5.3, a PAA cannot be varied. In circumstances where the details of a PAA have changed but a full Permit has not yet been issued, the activity promoter must inform the Permit Authority of the proposed changes and the Permit Authority will indicate whether a new PAA is required or a Permit Application containing the new information must be made.

8.2 Variations initiated by the Activity Promoter

8.2.1 *Necessary Variations*

- 8.2.1.1 From time to time an activity promoter will need to apply for a justifiable variation to a permit and/or its conditions. Some situations where a variation may be needed are:
- because the proposal in the original application was inaccurate or unrealistic
 - because the location or the method of working has changed in some way
 - where the activity promoter requires an extension to the agreed duration
- 8.2.1.2 The Permit Authority recognises that it should not prevent necessary activity, so the variation is likely to be granted, although the Permit Authority may require the conditions attached to the original permit to be varied or new conditions added if the changes to the permit warrant it.

8.2.2 *Applying for a Variation*

- 8.2.2.1 The activity promoter should make a request to vary the permit as soon as it becomes clear that the activity might require a change or may overrun so that the Permit Authority can investigate the request to satisfy itself that the proposed variation is appropriate and reasonable.
- 8.2.2.2 Regulation 15 (2) provides the following ways of applying for a permit variation:
- where the existing permit has more than 20% of its duration or more than two days to run, whichever is the longer, the activity promoter must apply for a variation electronically. This is to ensure that the variation is captured within the Permit Authority mandatory response time.
 - in any other case the activity promoter should first telephone the Permit Authority to ascertain whether the Permit Authority is prepared to grant the variation. If the Permit Authority agrees then the variation must be applied for electronically.
- 8.2.2.3 The Permit Authority will set out a procedure for requesting a variation to a permit within the WaSP scheme Operational Guidance.
- 8.2.2.4 It must be noted that a permit cannot be varied after it has expired (passed the permit end date). In these cases a new permit must be applied for. The activity promoter may be working illegally during this period.

- 8.2.2.5 Activity promoters must provide full details of the amendments made to the permit, either by telephone or as a works comment to enable the Permit Authority to fully consider the implications of the changes.
- 8.2.2.6 If the Permit Authority is content that all the information contained in the application meets an acceptable standard of detail to enable it to consider fully the impact of the activity and the suitability of the timing and methodology and any conditions attached to the application, it will issue a permit by way of a Grant Permit EToN response. A standard permit variation charge will apply.
- 8.2.2.7 The Permit Authority will respond to the request within two days of receipt (as shown in table 1, section 7.1).
- 8.2.2.8 If electronic systems fail then the application should be sent by another way such as email (section 5.8).

8.2.3 Extensions

- 8.2.3.1 In certain situations, an activity promoter may not be able to complete the works within the original permit duration and an extension to the permit may be required.
- 8.2.3.2 The Permit Authority is under no obligation to allow an activity to run beyond its permitted period. An activity that continues past its end date without a valid permit in place may constitute a criminal offence.
- 8.2.3.3 Where the Permit Authority considers the proposed extension to be reasonable and the activity does not conflict with other planned activities then the Permit Authority will not unreasonably withhold the extension.
- 8.2.3.4 There may be occasions where the Permit Authority does not consider the proposed extension to be reasonable. For instance, this might be due to poor works management by the activity promoter or an issue on site that the Permit Authority considers should have been dealt with more expediently. In these cases, the Permit Authority will grant a variation to the permit so that the activity promoter is not operating without a valid permit in place. However, the Permit Authority will use its powers under Section 74 of NRSWA to charge the activity promoter for an overrun of the 'reasonable period'.
- 8.2.3.5 Although in many cases the Permit Authority will grant the permit extension to minimise the disruption of a return visit, it may be necessary for the activity promoter to vacate the street to allow another activity to take place or to open up space for traffic. In these situations the activity promoter must submit a new application to complete the activity at a later date.
- 8.2.3.6 The Permit Authority will set out a procedure for requesting an extension to the permit within the WaSP scheme Operational Guidance.

8.2.4 Illegitimate Phasing of Activities

- 8.2.4.1 Where the Permit Authority can establish to its reasonable satisfaction that a subsequent permit application has been made at any given location as a result of:
- The closure of works following a refusal by the Permit Authority to grant an extension to the duration of a previous permit, or
 - The premature closure of the works by the activity promoter, before all those works specified in the works description given by the activity promoter are completed, to avoid an overrun under Section 74 occurring.
- 8.2.4.2 The Permit Authority may grant a subsequent permit with start and finish dates to allow the initial activity to be completed. The duration for this subsequent permit will reflect the illegitimate phasing of activities for these works and overrun charges will be applied in accordance with the current Section 74 regulations.

8.2.5 Multiple Excavations

- 8.2.5.1 Immediate activities may require the activity promoter to make several registerable openings in a street, for instance to locate a fault or a leak. As such the activity promoter must submit the first permit application detailing the location of the initial excavation within two hours of starting work.
- 8.2.5.2 The activity promoter must telephone the Permit Authority within two hours and give the location for further excavations on the same street within 50metres of this initial excavation. No permit variation will be required and therefore no charge will be applied.
- 8.2.5.3 Where the additional excavations are more than 50metres from the first, a permit variation application will be required. A standard permit variation charge will apply. The Permit Authority may opt to waive this charge if it feels the activity and notifications are being well managed.
- 8.2.5.4 Further excavations will be dealt with in the same way as these two examples, in 50-metre bands.
- 8.2.5.5 It should be noted that all excavations must be accurately recorded upon registration of the works.
- 8.2.5.6 If additional excavations are carried out in different streets (different USRN), or at a location that is substantially separate from the previous excavations then a separate permit application should be applied for.
- 8.2.5.7 If the activity promoter has made all reasonable efforts to contact the Permit Authority by telephone and cannot, they should record that and send the message electronically.
- 8.2.5.8 Although the above examples relate to Immediate works, there may be scenarios where such a process may be followed for other activity types. The activity promoter should contact the Permit Authority first to gain approval before initiating this process.

8.2.6 Fees for Promoter Initiated Variations

- 8.2.6.1 Applications for permit variations initiated by the activity promoter may be charged a fee. This is subject to the exemptions detailed in Chapter 9 and individual permit fee profiles for each WaSP scheme authority.
- 8.2.6.2 Where a variation to extend a permit takes that permit into a higher works category, the activity promoter will be required to pay the difference between the permit fees for the two categories as well as the permit variation fees.
- 8.2.6.3 Fees for each WaSP scheme Permit Authority are given in Appendix G and detailed in the authority Addendum (Chapter 18).

8.3 Variations Initiated by the Permit Authority

8.3.1 Necessary Variations

- 8.3.1.1 Once a permit is issued, the activity promoter should have reasonable confidence that the road space will be available to them. Nevertheless, there may be circumstances beyond the Permit Authority's control that necessitate a change in either the permit or its conditions.

- 8.3.1.2 Such changes should happen only when the new circumstances could not have been reasonably predicted and where the impact is significant. For example, extra traffic being diverted onto the road for which the permit has been issued due to another road being closed by floods, burst mains or a dangerous building, etc. If the consequent disruption cannot be mitigated in a better way it may be necessary to vary aspects of the permit such as the time or manner of working.
- 8.3.1.3 The Permit Authority must contact the activity promoter as soon as it becomes aware of a potential problem to discuss the best way to deal with the situation. However it is vital that both parties work together to ensure the circumstances on the ground can be properly coordinated and managed, while ensuring the activity promoter can best manage their changing situation to minimise further inconvenience and disruption and expedite the works swiftly.
- 8.3.1.4 If changes to the activity are required, a Permit Variation detailing the new terms should be applied for by the activity promoter. It may be necessary for the Permit Authority to first issue an Authority Imposed Variation EToN notification to annotate the required changes, before the activity promoter submits a Permit Variation and the Permit Authority can subsequently grant this.
- 8.3.1.5 It may be that instead of a permit variation, a new permit is issued, particularly if the activity promoter is required to suspend their operation or leave site. This should be agreed first between the Permit Authority and activity promoter.
- 8.3.1.6 The Permit Authority recognises that requesting a variation to a permit may cause substantial disruption to the activity promoter. However where agreement cannot be reached, the Permit Authority will issue an Authority Imposed Variation EToN notification to direct the changes it feels necessary to best manage the activity on the ground. The promoter must comply or reinstate and leave site. The promoter may then invoke the dispute resolution procedure set out in Chapter 12.

8.3.2 *Fee for Authority Initiated Variations*

- 8.3.2.1 No fee is payable for permit variations initiated by the Permit Authority, unless at the same time, the activity promoter seeks variations which are not the result of the circumstances causing the Permit Authority action. In such a case a variation fee would be payable, subject to the exemptions detailed in Chapter 9 and each individual WaSP scheme authority permit fee profile. The Permit Authority should act reasonably in this matter.

8.4 Suspension, Postponement or Cancellation of a Permit

- 8.4.1.1 There is no mechanism in the Permit Scheme Regulations to formally suspend or postpone a permit, only for varying or revoking it them.
- 8.4.1.2 If the Permit Authority has to suspend or postpone an activity that it has already issued a permit for but which it intends should happen at a later date, it should use the permit variation provisions as described above to enforce the change of dates. No fee will be charged for such authority-initiated variations.

8.4.2 *Suspension or Revoking a Permit*

- 8.4.2.1 Regulation 10(4) allows a WaSP scheme authority to revoke a permit where it considers that an activity promoter is failing to comply with the terms of that permit and its conditions.

- 8.4.2.2 The Permit Authority will inform the activity promoter immediately if it becomes necessary to do so and allow a reasonable timeframe for the undertaker to either suspend its activities pending an agreement to continue working or to make the site safe and leave site. Where necessary the Permit Authority may use its provisions under Regulation 18 to clear the street or take any other action necessary.
- 8.4.2.3 The Permit Authority should consider whether other sanctions are more suitable than, or necessary in addition to, the revoking of a permit (see Chapter 11).
- 8.4.2.4 Where a new permit or permit variation is required to resume an activity, a fee will be payable in line with the permit charges set by that WaSP authority, unless the Permit Authority has to revoke a permit through no fault of the activity promoter in which case there will be no charge for a replacement application (see section 9.3).

8.4.3 *Cancelling a Permit*

- 8.4.3.1 If a promoter wishes to cancel a permit or withdraw a permit application for which they have no further use, they should submit a cancellation notice for that permit, as detailed in the EToN technical specification.
- 8.4.3.2 On strategically significant streets the cancellation should be submitted on the day before the due permit start date so that the Permit Authority can put in place any mitigating action it feels necessary.
- 8.4.3.3 There is no fee for cancelling a permit although the charge for issuing the permit originally will remain payable.
- 8.4.3.4 Any activity that takes place after a permit is cancelled may constitute a criminal offence.
- 8.4.3.5 A permit that is 'in progress', or one for Immediate activities, should not be cancelled unless that works status has been submitted in error. The EToN technical specification details how these situations should be dealt with.

8.5 EToN Failures

- 8.5.1.1 Where there is an EToN system failure by either the activity promoter or the Permit Authority, an alternative strategy must be implemented (see section 5.8).

9 Permit Charges

9.1 Introduction

9.1.1.1 Under Regulation 30 the WaSP scheme is able to charge statutory undertakers a fee in the following circumstances

- The application of a provisional advance authorisation
- The issue of a permit
- The variation of a permit or the conditions of a permit
- The difference between fees for an activity when it moves from one works category to another

9.2 Fee Levels

9.2.1.1 The WaSP scheme Permit Authority's will set their fee levels independently of each other, in accordance with the DFT document *Permit Fees Guidance (July 2008)*, and the *Additional Advice Note – for developing and operating future permit schemes (January 2013)*, and in accordance with the maximum fee levels specified in Regulation 30.

9.2.1.2 Fees for each WaSP scheme Permit Authority are given in Appendix G and detailed in authority Addendum (Chapter 18).

9.2.1.3 Income from the scheme will only be used to meet the allowable costs of running the scheme.

9.3 Waiving Permit Fees

9.3.1.1 Regulation 30 also provides a mechanism for discounting or waiving the normal permit fee. Under the WaSP scheme a promoter will not be charged a fee:

- if the activity promoter is a highway authority or is carrying out Works For Road Purposes (works on behalf of a highway authority)
- if a permit is deemed to be granted because the Permit Authority had failed to respond to an application in the time required
- if a permit variation is initiated by the Permit Authority
- where the Permit Authority has to revoke a permit through no fault of the activity promoter the permit fee will be refunded to the Promoter.
- for the maintenance of fire hydrants carried out by the fire service or a contractor designated by the fire service to carry out this work on their behalf
- where the works are Diversionary Works as a result of a Major Highway or Bridge works, initiated by the Highway Authority, as described in Section 86 of NRSWA;
- Any other circumstances as detailed within Permit Scheme Regulations.

9.3.1.2 In addition, the Permit Authority may waive an individual charge where it considers such action is merited.

9.4 Reduced Permit Fees

9.4.1.1 A minimum discount of 50% will be applied in the following situations.

9.4.2 Collaborative Works

- 9.4.2.1 Regulation 31(4) provides for a permit fee discount where activity promoters are collaborating, either in timing or extent of the programmed activity, to reduce the impact of their works. This includes where statutory undertakers are collaborating with highway authority works.
- 9.4.2.2 The Permit Authority must be satisfied that all activities are designed and are being undertaken in a manner that minimises the impact of the works. All promoters must apply for a permit and these must be cross-referenced to one another so that the Permit Authority is able to identify the scope of the collaborative working. The applications must be made within three days of one another.
- 9.4.3 *Multiple Applications for Single Activity***
- 9.4.3.1 The Statutory Guidance for Permits requires the Permit Authority to apply a discount where an activity promoter submits multiple permit applications where an activity is part of a project that involves working on more than one adjacent streets. For example if repairs on a pipe go round a corner from one street into another. It is not intended to cover whole area wide projects in a single permit.
- 9.4.4 *New Connections***
- 9.4.4.1 A discount will be applied where a new connection is being made at the request of a statutory undertaker's customer. This will only apply in the case of completely new or first time connections.
- 9.4.4.2 The statutory undertaker will be required to show clearly on the customer invoice that the permit fee is waived by the Permit Authority, and indicate that this is part of a joint agreement with the Permit Authority. A copy of this invoice must be provided to the Permit Authority if required.
- 9.4.5 *Working only outside Traffic Sensitive Times***
- 9.4.5.1 A discount will be applied where an activity promoter is able to undertake their works wholly outside of traffic-sensitive times on a strategically significant street.
- 9.4.5.2 In general, this is only applicable on works that are less than one-day duration since these can fall between or after peak periods. However, this discount should also be applied to works where carriageway impact is minimised for peak or traffic-sensitive periods, for instance opening up the carriageway by using plating, or a change of traffic management/control etc when operatives are not working on site.
- 9.4.5.3 Suitable permit conditions would need to be attached (Chapter 6), and it would be necessary to gather evidence from site (for instance photos or inspection records) to show that this condition was being maintained for the duration of the activity or as agreed. Suitable evidence provided by the activity promoter or contractor should be acceptable as long as it meets the requirements of the Permit Authority to ascertain compliance.
- 9.4.6 *Innovation***
- 9.4.6.1 A discount will be applied where the activity promoter is able to undertake their works using an innovative working practice and achieve a saving in disruption.
- 9.4.6.2 In order to apply this discount there must be quantifiable benefits, for instance either a significant reduction in duration or a physical reduction in site footprint that allows a higher level of trafficking.
- 9.4.6.3 The Permit Authority should, where possible, quantify this benefit economically, in order to justify this discount. These situations should be highlighted within the WaSP scheme authority's annual report.

- 9.4.6.4 It will be the intention of the WaSP scheme that the Working Group will work with statutory undertakers to define more clearly situations where this discount may be applied and this will become part of the WaSP scheme Operational Guidance. As new technologies or methodologies become the norm then these agreements may need to be reconsidered regularly.

9.4.7 Economic Development

- 9.4.7.1 A discount may be applied where it is demonstrated that an activity provides significant economic benefit to the local authority or Council. For instance supplies for a new development, or where it is demonstrated that a network investment programme is being undertaken to meet customer demand.
- 9.4.7.2 The WaSP scheme Operational Guidance will detail instances when this discount will be applied.

9.4.8 Other Situations

- 9.4.8.1 Each WaSP scheme authority may waive an individual charge or offer a discount where it considers such action is merited.

9.5 Individual Authority Discounts

- 9.5.1.1 Each WaSP scheme Permit Authority may set out additional circumstances where it will always waive or discount permit fees and this will be contained in the authority's Addendum (Chapter 18).

9.6 Additional Charges

- 9.6.1.1 Where a variation to extend a permit takes that permit into a higher works category, the activity promoter will be required to pay the difference between the permit fees for the two categories as well as the permit variation fees.

9.7 Fee Review

- 9.7.1.1 Each WaSP scheme authority will review its level of fees annually to ensure that the overall fee income does not exceed the allowable costs. The outcome of the annual fee reviews will be published and open to public scrutiny.
- 9.7.1.2 If a sustained surplus or deficit occurs over a number of years the fee levels will be adjusted accordingly.

9.8 Invoicing Arrangements

- 9.8.1.1 Problems with electronic systems, or incorrect sequencing of notices, or other reasons may lead to differences between the activity promoter and the Permit Authority over what each party consider applicable charges.
- 9.8.1.2 It is therefore anticipated that for each month a 'draft invoice' will be produced and submitted to the activity promoters for them to review and reconcile with their own systems.
- 9.8.1.3 Following this submission there will be a ten-day period to enable the activity promoter to agree the charges with the Permit Authority.
- 9.8.1.4 Following agreement, the Permit Authority will submit a final invoice under its normal terms of payment.
- 9.8.1.5 The WaSP scheme Operational Guidance will set out a process for invoicing and payment terms.

10 Charging for Overrunning Activities

- 10.1.1.1 The WaSP scheme authorities will operate an overrun charging scheme under Section 74 of NRSWA, alongside this permit scheme.
- 10.1.1.2 The scheme will apply as set out in the Street Works (Charges for Unreasonably Prolonged Occupation of the Highway) (England) regulations and any future amendments as detailed in regulations or the relevant code of practice.
- 10.1.1.3 Permit scheme regulation 37(4) modifies Section 74 of NRSWA to allow the duration of the activity to be set or modified through the permit application and variation process.
- 10.1.1.4 Where the permit Authority has reason to believe that overrun charges are being avoided through the misuse of permit phases, it will treat a subsequent permit application as an illegitimate use of phases (see 8.2.4).
- 10.1.1.5 Activities carried out by, or on behalf of, a highway authority are not subject to Section 74 overrun charges. However, under the WaSP scheme promoters of such activities will be required to follow the same procedures as promoters who are undertakers. The Permit Authority will inspect such activities in the same way as an undertaker's activity and will carry out any evaluations, *in accordance with the Permit Scheme Regulations*, equally to all Promoters..
- 10.1.1.6 For the purposes of Section 74, those strategically significant streets that do not fall into the regulatory definition of "traffic sensitive" will not be charged at the higher section 74 rates (see section 4.2.4).

11 Permit Offences and Sanctions

11.1 Permit Offences

- 11.1.1.1 The Permit Scheme Regulations create two offences for statutory undertakers
- Carrying out activities on the street without a permit, or in the case of immediate works not applying for a permit within two hours of the works starting
 - Carrying out activities on the street or highway in a way that contravenes the conditions attached to a permit, or the conditions that are applied to an immediate activity before a permit is issued for those activities.
- 11.1.1.2 Permit offences do not apply to highway authority activities, however the Permit Authority will monitor these activities in the same way it does statutory undertakers to ensure a consistent approach (see Chapter 14).
- 11.1.1.3 Immediate activities may start without a permit in place, however, the activity promoter must apply for a permit within two hours of starting work or by 10:00 the following working day where the activity begins outside of normal working hours. The activity promoter can then continue working within the terms of any conditions that apply to its application, for example regarding working hours.
- 11.1.1.4 The Permit Authority will issue a permit within two days of the activity starting. Once issued, the activity promoter is bound by the terms of the permit and the attached conditions. This supersedes the terms in the application and any previous conditions set by the authority.

11.2 Working without a Permit

- 11.2.1.1 Regulation 19 creates the criminal offence for an undertaker or someone acting on its behalf to undertake works without a valid permit.
- 11.2.1.2 A permit will cover a specified activity at a specified location at specified times as described by the permit start and end dates. These are referred to in the scheme as the permit terms and any activity that contravenes them is an offence. All elements of the activity must be completed within the start and end date of the permit – this includes not only the opening of the street, but all the ancillary work as well, such as stockpiling materials, setting up and disbanding traffic management and clearing the site.
- 11.2.1.3 To avoid committing an offence some situations that must be considered by the activity promoter
- Once a permit expires, it cannot be varied. A new permit must be raised.
 - An activity promoter may be committing an offence if it starts, or continues to work after cancelling a permit.
 - Immediate activities may start without a permit in place however the activity promoter must apply for a permit within two hours of starting work or by 10:00 the following working day where the activity begins outside of normal working hours (section 4.3.6).
 - Where there is a dispute over the terms of a permit then the dispute procedure described in Chapter 12 should be used. In these cases the Permit Authority may not issue a permit until the dispute is resolved or, in some cases, it might issue a permit with its own conditions attached. This is also covered in Chapter 7.

- Where a Permit Authority fails to respond to an application within the prescribed timescale, a permit is deemed to be issued in the terms of the application. There is no requirement for the activity promoter to cancel the application and resubmit (see section 7.1.5).

11.3 Breaching the Conditions of a Permit

- 11.3.1.1 Regulation 20 creates the criminal offence for an undertaker or someone acting on its behalf to undertake works in breach of a condition.
- 11.3.1.2 The conditions included in a permit will be recorded in the permit register. If a permit is varied, a new permit will be issued and any new conditions will be included and recorded. The Permit Authority and activity promoter will endeavour to ensure that conditions are precise so that both can easily check performance on site against the approved conditions.
- 11.3.1.3 Conditions will apply to immediate activities for the period before a permit is issued (see section 6.10). The WaSP scheme authorities may also detail further conditions that should be applied to all Immediate activities within their Addendum (Chapter 18) or as part of the WaSP scheme Operational Guidance.

11.4 Sanctions

- 11.4.1.1 Where possible the Permit Authority will seek to resolve problems informally to achieve compliance with the permit scheme. Where this fails, or where an activity promoter persistently offends, or the Permit Authority considers that an informal resolution is not appropriate, then the Permit Authority has three sanctions it may use

- Issue a notice to take remedial action
- Issue a Fixed Penalty Notices
- Prosecution

11.4.2 Remedial Action

- 11.4.2.1 Regulation 18 allows the Permit Authority to issue a notice requiring remedial action within a timeframe where a promoter is working without a permit or in breach of a permit condition.
- 11.4.2.2 The remedial activity may include removing the activity, remedying the breach of condition or discontinuing the obstruction.
- 11.4.2.3 The steps the Permit Authority requires the activity promoter to take, and the timeframe set out in the notice, will be reasonable for the circumstances.
- 11.4.2.4 Where a promoter does not take the remedial action within the timeframe, the Permit Authority will take such steps as it considers appropriate to achieve the outcome in the notice, and may recover any costs from the undertaker.

11.4.3 Fixed Penalty Notice

- 11.4.3.1 Permit Scheme Regulations 21 to 28 (and Schedules 1 and 2) authorise permit authorities to issue Fixed Penalty Notices (FPNs) in respect of criminal offences. Fixed Penalty Notices offer the offender an opportunity to discharge liability for an offence by paying a penalty amount.
- 11.4.3.2 The Permit Authority will follow the FPN procedure set out in the *Code of Practice for Permits* Chapter 18 and the Permit Scheme Regulations , and any subsequent amendments.
- 11.4.3.3 Prosecution through the magistrates court remains an option for the Permit Authority.

11.4.4 *Prosecution*

- 11.4.4.1 The authority may prosecute the offence through the courts following the usual processes. Normally this option will be invoked where an undertaker is persistently offending on an issue that the Permit Authority considers serious.
- 11.4.4.2 Decisions on the prosecution of alleged offences are for the Permit Authority. Prosecution should not necessarily be the preferred option - the process can be time consuming and even FPNs do not offer an immediate solution.

12 Dispute Procedures

12.1.1.1 Permit authorities and activity promoters must use their best endeavours to resolve disputes without having to refer them to a formal appeals procedure. However, it is recognised that occasionally this may not be possible.

12.1.1.2 If agreement cannot be reached locally on any matter arising under this permit scheme or the associated Code of Practice for Permits or Permit Scheme Regulations, then the dispute should be referred on the following basis.

12.1.2 Straightforward Issues

12.1.2.1 Where the Permit Authority and the activity promoter(s) consider that the issues involved in the dispute are relatively straightforward, the matter will be referred initially to the WaSP Operational Group as a matter for discussion and advice.

12.1.2.2 If this fails to provide a solution acceptable to either party, then the matter will be referred to impartial members of the Permit Authority's regional HAUC for review. That review should take place within five working days from the date of referral. The Permit Authority will accept the result as binding.

12.1.3 Complex Issues

12.1.3.1 If the Permit Authority and the activity promoter(s) involved in the dispute think the issues are particularly complex, HAUC (UK) will be asked to set up a review panel of four members - two utilities and two street authorities. One of the four persons will be appointed as Chair of the panel by the HAUC (UK) joint chairs.

12.1.3.2 Each party must make all relevant financial, technical and other information available to the review panel. The review would normally take place within ten working days from the date on which the issue is referred to HAUC (UK). The Permit Authority will accept the conclusions of the review panel as binding.

12.1.4 Adjudication

12.1.4.1 If agreement cannot be reached by the procedures described, for instance if one or more of the parties does not accept the ruling of the Regional HAUC or HAUC (UK) review as binding, the dispute should be referred to independent adjudication provided that the parties agree that the decision of the adjudicator is deemed to be final. The costs of adjudication will be borne equally unless the adjudicator considers that one party has presented a frivolous case, in which case costs may be awarded against them. Where the adjudication route is followed, the parties should apply to the joint chairs of HAUC (UK), who will select and appoint the independent adjudicator from suitable recognised professional bodies.

12.1.5 Arbitration

12.1.5.1 Disputes relating to matters covered by the following Sections of NRSWA may be settled by arbitration, as provided for in Section 99 of NRSWA.

- Section 61 (6) - consent to placing apparatus in protected streets
- Section 62 (5) - directions relating to protected streets
- Section 74 (2) - charges for occupation of the highway where works are unreasonably prolonged
- Section 74A (12) - charges determined by reference to duration of works
- Section 84 (3) - apparatus affected by major works
- Section 96 (3) – recovery of costs or expenses

13 Related Matters

13.1 Temporary Traffic Restriction Orders

- 13.1.1.1 Provisions governing temporary road closures and traffic restrictions for works or other activities in the street are found in Sections 14 to 16 of the *Road Traffic Regulation Act 1984*, as amended by the *Road Traffic (Temporary Restrictions) Act 1991*, and regulations made under the 1984 Act and subsequent amendments.
- 13.1.1.2 Each WaSP scheme authority will have their own processes in place to manage Temporary Traffic Regulation Orders (TTROs) and the following section offers advice on the general principles.
- 13.1.1.3 There are two procedures;
- Where urgent action is needed the Permit Authority as traffic authority may issue a **'temporary notice'** imposing a short-term closure or restriction. Prior notice is not necessary. The notice is limited to 21 calendar days if there is a danger to the public or risk of serious damage to the road, independent of street works -a leaking gas main, for example. It can be extended by one further notice. The notice is limited to five days if there is no risk of danger or damage.
 - In less urgent cases, the traffic authority may make a **'temporary order'**, which may remain in force for up to 18 months. This is limited to six months for footpaths, bridleways, cycle tracks and byways open to all traffic.
- 13.1.1.4 A temporary notice and a temporary order may provide that restrictions have effect only when traffic signs are lawfully in place. This will help limit traffic disruption where activities progress along a length of road.
- 13.1.1.5 In extraordinary circumstances, the Road Traffic Act 1991 Section 49(4A), allows the police to suspend designated street parking places temporarily to prevent or mitigate traffic disruption, or danger to traffic. This could prove useful to promoters carrying out emergency works.
- 13.1.1.6 The following sections provide a basic guidance to the issuing of a temporary order or notice, however the WaSP scheme Operational Guidance provides additional detail and each WaSP scheme authority will make relevant forms and their own processes available on their website.
- 13.1.1.7 Activity promoters should be aware of additional timescales the traffic authority may need to process such approvals and build this into their application.

13.1.2 Temporary Notices

- 13.1.2.1 This procedure will only apply to immediate activities.
- 13.1.2.2 The promoter will inform the traffic authority as soon as practicable if a closure or traffic restriction is needed, or in any case with the Immediate permit application. This will be done in the manner prescribed by the Permit Authority on their website and detailed within the WaSP scheme Operational Guidance and approval will be given retrospectively.
- 13.1.2.3 The authority will consult with the police and all relevant parties, and confirm, as soon as possible, whether a notice will be made.
- 13.1.2.4 It may be necessary to agree changes to the site set up or permit as required before approval is given.
- 13.1.2.5 The traffic authority must state in the notice:
- the reason for issue

- its effect
- alternative routes (where applicable); and,
- the date and duration of the notice.

13.1.2.6 The traffic authority must also notify the emergency services and any other traffic authority with roads that may be affected. This should be done on, or before, the day the notice is issued.

13.1.3 Temporary Orders

13.1.3.1 The traffic authority must publish notice of intention to make a temporary order at least seven days in advance. If the order is expected to last for more than 18 months because activities are to be executed on or near the road, it is advisable to make application for a Permanent Traffic Regulation Order. Any Orders should be revoked as soon as the activity is completed.

13.1.3.2 The traffic authority must also notify the emergency services and any other traffic authority with roads that may be affected. This should be done on, or before, the day the order is issued. These bodies should be consulted, as well as notified, if the closures are expected to last for more than 18 months.

13.1.3.3 A temporary traffic order is generally needed for planned activities in the street (except where the order follows a closure notice). If a closure order is needed, the activity promoter should notify the traffic authority at least three months in advance. This will allow the Permit Authority time to consult, and to obtain approvals and advertise the order.

13.1.3.4 Activities that require a temporary traffic order are automatically classed as Major and require at least three months' notice for applying for a PAA.

13.1.3.5 The promoter must submit all the information needed to justify a road closure with the application for an order.

13.1.3.6 As set out above it will be a condition of a Permit where a temporary traffic order is required that the order will be in place before the activity, or the relevant part of the activity, starts on site.

13.1.4 Continuation of Closures and Restrictions

13.1.4.1 A five-day temporary traffic closure or restriction notice cannot be extended.

13.1.4.2 A 21-day temporary notice can be extended by one further notice giving up to 21 days more. Both five-day and 21-day notices may be followed immediately by a temporary order. This may be made without the seven days prior notice normally needed for such orders.

13.1.4.3 If the original estimate of the duration of the activity changes, a request for a permit variation will be necessary.

13.1.4.4 There will be cases where works will unavoidably overrun the temporary notice period. Where this is apparent from the beginning, promoters must inform the traffic authority. The authority will take the necessary follow-up action without delay, to enable the activity to continue uninterrupted.

13.1.4.5 If the overrun becomes apparent only after the activity has started, the activity promoter should immediately inform the Permit Authority that either a further notice or an order will be required. This may be needed before the request for a Permit variation is made.

- 13.1.4.6 It might not be possible to make a follow-up order before a five-day notice expires. The activity may have to be suspended, and the site temporarily restored to traffic until the correct procedures have been followed. The traffic authority will try to minimise both, the number of cases where this happens, and, where it is unavoidable, the period of suspension involved. This problem is unlikely to arise in the case of a 21 day temporary order.
- 13.1.4.7 Subject to the time limit for temporary orders, see above, a closure or restriction imposed by a temporary order may be continued by a further order. If this is required, the activity promoter should notify the traffic authority immediately, giving, wherever possible, at least one month's notice.

13.1.5 Policy

- 13.1.5.1 When a notice or order has been made, the activity promoter must comply with the requirements of the traffic authority and the police for the closure of the road.

13.1.6 Charges

- 13.1.6.1 Section 76 of NRSWA allows traffic authorities to recover the costs of issuing temporary notices or making TTROs. Upon receipt of an application for a TTRO, the Permit Authority can provide utilities with the estimated cost. These costs are not part of the WaSP scheme. Invoices will be itemised, for example:

- cost of the order;
- advertising in local papers;
- administration fees.

- 13.1.6.2 There may also be charges made for erecting and maintaining the on-site notices that are required.

13.2 Working Near Rail Tracks

- 13.2.1.1 Particular attention must be given to the possible effects of activities taking place at or near level crossings. Promoters planning works in such locations must refer to Appendix C of the *Code of Practice for Permits* or as subsequently amended, which sets out Network Rail's requirements.

13.3 Vehicle Parking at Street and Road Works

- 13.3.1.1 This is not safety advice. The Code of Practice on Safety at Street Works and Road Works should always be consulted.

13.3.2 Vehicle within Activity Site

- 13.3.2.1 A works vehicle may be parked in an activity site provided it is necessary for the carrying out of that activity. Basic site layouts are shown in the *Code of Practice on Safety at Street Works and Road Works*. A vehicle entirely within the coned-off area of the site may require a larger coned-off area than would otherwise be the case.

13.3.3 Vehicle outside Activity Site

- 13.3.3.1 A vehicle may be parked outside an activity site provided the parking rules that apply to any other vehicle in that street are obeyed. Outside of the activity site, the vehicle has no special status and no exemption from parking enforcement.

13.3.4 Implications

- 13.3.4.1 When assessing the impact of activities the parking of any vehicles associated with the activity must be taken into account. This is a particular problem for activities which, but for the presence of a works vehicle, would take place entirely within the footway.

- 13.3.4.2 If a vehicle is parked adjacent to the activity, in a place that vehicles could not normally use, then it must be part of the activity site. It must be signed and guarded appropriately. The activity is then not wholly confined to the footway but encroaches onto the carriageway. Applications for permits must reflect this.

13.3.5 Parking Restrictions

- 13.3.5.1 The Traffic Regulation Order imposing parking restrictions on a particular street should already contain an exemption allowing for activities to take place in a parking bay. Promoters should check whether any further dispensation is required well before the works are due to start.
- 13.3.5.2 In situations where it is essential to the traffic management of an activity to suspend parking bays may require a Permit Condition will used to ensure that these dispensations are in place before the activity commences.
- 13.3.5.3 Each authority will have its own processes to follow in this regard and relevant contact details will be provided in the WaSP scheme Operational Guidance or on the Permit Authority web site.
- 13.3.5.4 Activity promoters should be aware of other timescales the traffic authority may need to process such approvals, and they should build this into their application lead-in period. In addition there may be other costs outside the scope of the WaSP scheme.

13.4 Storage of Materials

- 13.4.1.1 Activity promoters and permit authorities should take care to place materials so that they do not cause an obstruction to road users. This is especially important if materials are stored away from the activity site but still within the highway boundaries. The storage must have its own permit with conditions if it is separate from the activity site.
- 13.4.1.2 Where the storage of excavated material causes problems such as congestion then a Permit Condition may be applied to ensure the removal of the materials.

13.5 Apparatus Belonging to Others

- 13.5.1.1 There may be other apparatus where activities are planned and under NRSWA Section 69, those carrying out activities must ensure that the owners of that apparatus are able to monitor the activity and that requirements to take reasonable steps to protect the apparatus are followed. Failure to do so is a criminal offence.

13.6 Assessing the Impact of Activities

- 13.6.1.1 All activities in the highway have a disruptive effect on traffic, including vehicular and pedestrian. The Disruption Effect Score is a simple numeric indicator of the disruption likely to arise from a given activity. An impact assessment is a broad indicator of the potential disruption that could arise from an activity on the highway.
- 13.6.1.2 The Permit Authority may undertake an impact assessment or request that the activity promoter provides such an assessment as part of the permit application process. The impact assessment will be used within the co-ordination process to prioritise activities according to their potential for causing disruption. The assessment may also be used to provide public information on the disruptive effects of activities.
- 13.6.1.3 Details of the calculations and how to make use of the resulting disruptive effect score are given in appendix E.

13.7 Maintenance of Undertaker's Apparatus

- 13.7.1.1 Undertakers have a duty under NRSWA Section 81 to maintain apparatus in the street to the reasonable satisfaction of the street authority, having regard for the safety and convenience of traffic, the structure of the street, and, integrity of apparatus in it. Bridge, sewer and transport authorities also have an interest, so far as any land, structure or apparatus they own is concerned.
- 13.7.1.2 Most undertakers have statutory obligations to maintain their networks - quite apart from which, they must maintain systems in efficient working order to properly discharge their safety and service obligations to their customers.
- 13.7.1.3 Thus authorities and undertakers have a shared interest in the proper maintenance of apparatus in the street.
- 13.7.1.4 As with reinstatements, it is important that the street authority reports any apparatus in an unsatisfactory condition quickly and accurately and includes the level of severity of the problem. The owner must respond and carry out any necessary remedial works within the reasonable timescales agreed with the street authority.
- 13.7.1.5 WaSP scheme authorities will operate Section 81 as described in the Permit Scheme Regulations , the *Code of Practice for Permits* and the EToN technical specification, as well as any guidance issued by HAUC, and it is expected that undertakers carry out their obligations in this regard. Further guidance on process is contained within the WaSP scheme Operational Guidance.

13.8 Diversion Routes

- 13.8.1.1 Any diversion of vehicles, pedestrians or cyclists that is required must be agreed with the Permit Authority in advance of the activity taking place. Additional consultation may be required with interested stakeholders, and the route must be agreed to be suitable for the purpose.
- 13.8.1.2 The Permit Authority may require a traffic management drawing and a signing schedule as part of the illustration of the activity to show the proposed route(s) and signs.
- 13.8.1.3 The illustration or the agreements made must be referenced in the permit application by attaching a relevant Permit Condition to the permit.
- 13.8.1.4 When a diversion is in use it is expected that the activity promoter or their contractors will check the diversion route signage on at least a daily basis to ensure that the signs are visible and in the correct positions. This applies to all kinds of diversion; vehicular, cycle, pedestrian etc.
- 13.8.1.5 When a diversion route is not required, for instance when a road is opened out to traffic for a period of time, then the sign faces should all be covered or removed so they do not cause confusion or further disruption to the travelling public. Once the diversion is no longer required then the signage must be removed immediately.
- 13.8.1.6 Should an activity requiring a diversion overrun then the signage must remain in place and be maintained as long as the diversion is required.

13.9 Emergency Traffic Management

- 13.9.1.1 Immediate activities can cause significant disruption on any street due to the unknown nature of the cause.
- 13.9.1.2 Prompt notification and clear understanding of these kinds of situation enable the Permit Authority to implement contingency plans to initiate additional traffic management arrangements (such as adjustments to traffic signals etc) and to make information available to the travelling public as quickly as possible to mitigate the impact of that activity.

13.9.2 Streets Subject to Immediate Notification

- 13.9.2.1 Some streets or parts of a street are particularly vulnerable to traffic disruption. For these locations the Permit Authority may wish to have the earliest possible information about an Immediate activity to enable it to initiate traffic management arrangements and provide information to the public that will mitigate the impact of the activity.
- 13.9.2.2 Typically, these will be key routes, pinch points or busy pedestrian areas and the activity promoter undertaking Immediate activities should contact the highway authority prior to carrying out the activity on that street.
- 13.9.2.3 Such street sections will be defined in the authority's ASD as those where "early notification of immediate activities is required" and the situations when this is necessary and the manner of contacting the Permit Authority will be clearly defined. These roads will also be within the WaSP scheme Operational Guidance.
- 13.9.2.4 The promoter or contractor should adhere to any directions or recommendations that are made by the Authority in these cases so that the surrounding network impact may be managed by the authority.

13.9.3 Severe Traffic Control

- 13.9.3.1 By their nature, Immediate activities might require the use of traffic control at very short notice to manage a situation that might cause danger to the general public or the site.
- 13.9.3.2 Since it is unlikely that there has been substantial pre-planning of these activities, where the activity promoter requires either the use of temporary traffic signals or finding it necessary to close a road at any point during the life of an Immediate activity, the Permit Authority should be contacted prior to implementing these traffic management provisions.
- 13.9.3.3 It is recognised that in certain circumstances it may be necessary to implement such traffic control measures first, to minimise risk to the public. However, it is important to ensure that the discussion with the Permit Authority takes place as a priority in these situations and should not be left for a period of time.

13.10 Specialist Materials

- 13.10.1.1 Notwithstanding the provisions of NRSWA Section 70, there may be occasions where it is agreed as part of the coordination and permit application process that an interim or permanent reinstatement should take place as part of the activity allowed by a permit.
- 13.10.1.2 In some locations, the Permit Authority may require a first time permanent reinstatement using specialist materials. Such areas will typically be high amenity areas that are important locally for tourism or where there is high footfall or regular events, where the Authority feels that a suitable first time permanent reinstatement is required to ensure the aesthetic impact is not reduced.
- 13.10.1.3 These areas will be specified by the Permit Authority within their ASD and will also be provided as part of the WaSP scheme Operational Guidance.
- 13.10.1.4 Examples of specialist materials might be York Stone, resin paving systems or as determined by the Authority.
- 13.10.1.5 Where the activity is planned, then the promoter should ensure that the appropriate materials and operatives are required to be available before the activity can commence.

- 13.10.1.6 In the case of Immediate activities, or planned activities where the specialist material cannot be sourced in time., then the permit authority may agree to an interim reinstatement in order to make the site safe as quickly as possible and to enable a high quality permanent reinstatement to be correctly planned, rather than a poor permanent reinstatement being undertaken on the first pass.
- 13.10.1.7 The permanent reinstatement must be completed within 6 months as given in NRSWA Section 70(4): "If it is interim, he shall complete the permanent reinstatement of the street as soon as reasonably practicable and in any event within six months (or such other period as may be prescribed) from the date on which the interim reinstatement was completed; and he shall notify the street authority when he has done so"

13.11 Temporary Traffic Signals

- 13.11.1.1 Any use of temporary traffic signals requires agreement from the Permit Authority. The EToN technical specification provides a transaction for the activity promoter to submit an application for temporary traffic signals that is linked to a particular PAA, permit or application.
- 13.11.1.2 Typically an application for temporary signals will include information such as:
- Traffic management drawing showing site layout
 - Signal operating pattern, for example during the working day, 24hr operation, overnight, off-peak etc
 - Signal configuration, for example stop/go, two-way, two-way with junction, multi-way etc
 - Detail on timings of signals and phasing, particularly for the use of multi-way signals or where timings on two-way signals alters during the day to take into account and help control tidal flow of traffic etc.
 - Whether the signals should be manually operated at any time to help ease traffic flows and minimise delays.
- 13.11.1.3 The authority will consider the application in the context of the proposed activity and if the activity promoter has provided all the required information relating to the operation of the temporary signals to the satisfaction of the Permit Authority, it will be approved.
- 13.11.1.4 If the application is not approved then the Permit Authority will provide the reasons for non-approval as part of the response. This application response will be separate to the response to the linked permit application or PAA.
- 13.11.1.5 An application may be re-submitted multiple times until it is approved by the Permit Authority.
- 13.11.1.6 Activity promoters should note that a relevant Permit Condition must be attached to a permit application for any activity that requires the use of temporary traffic signals, whether or not at the point of issue an application for temporary signals has been submitted. If works are present on site without such approval, the activity promoter may be committing an offence.
- 13.11.1.7 Activity promoters should note that approval of temporary signals may require a longer time period than the notice period of a Minor, or Standard, or Major follow-up permit application and so should be mindful of this when submitting the permit applications and allow extra time on the notice period.

- 13.11.1.8 The WaSP scheme Operational Guidance provides a commitment from all WaSP scheme authorities to meet, where practicable, certain timeframes for approving different temporary signal configurations, although it should be noted that certain agreements will necessitate a longer period to assess and discuss with stakeholders.
- 13.11.1.9 For Immediate activities the traffic signal application must be submitted with the Immediate application where it is anticipated that temporary traffic signals are to be used. Where the activity is taking place in a strategically significant street the activity promoter must contact the Permit Authority by telephone immediately to inform them.
- 13.11.1.10 Where during the course of any activity it is considered necessary by the activity promoter to change the method of traffic management to using temporary traffic signals, the activity promoter must contact the Permit Authority immediately (and in any case before the signals are put in place) to discuss this change of traffic control.
- 13.11.1.11 The WaSP scheme authority may accept traffic signal application forms outside of the EToN process. A suitable procedure is set out in the WaSP scheme Operational Guidance.

13.12 Environmental Issues

- 13.12.1.1 Any site must be maintained in a suitable manner, particularly when left unattended. This includes ensuring materials, spoil and equipment is stored in a tidy manner and in a way that ensures they cannot be tampered with and do not spill out of the works areas.
- 13.12.1.2 Activity promoters are strongly advised to liaise with the authority's arboriculture consultants and other environmental officials along with any necessary borough or district council officers when drawing up their proposals. This should ensure that wherever possible, and at reasonable cost, any environmental requirements can be met.
- 13.12.1.3 The Permit Authority will often be best placed to advise on these matters on receipt of permits but the onus lies on the activity promoter to do so wherever possible before the activity is planned to commence.
- 13.12.1.4 A promoter considering burying plant and apparatus that is currently above ground should contact any other utility with similar apparatus to see whether it wishes to share the underground facility.
- 13.12.1.5 There may be occasions where additional care must be taken in regards to maintaining the site in a clean and tidy manner throughout the duration the activity. This might include swift removal of any spillage of materials onto the public highway or waste from a site.
- 13.12.1.6 In such circumstances, a relevant Permit Condition requiring action at the end of any activity period that the activity promoter must ensure that surplus material, whatever the source, must not be left on site, may be imposed. A Permit Condition may be attached or imposed, but will normally only be applied to activities on specific roads due to environmental reasons, high footfall, planned event or within a tourist area.

14 Monitoring the Permit Scheme

- 14.1.1.1 The objectives of the permit scheme are set out in section 2.3. As required by Permit Scheme Regulations the Permit Authority will carry out an evaluation of the WaSP Scheme to show how the scheme is being operated and to measure whether the objectives are being met.
- 14.1.1.2 All highway authority and statutory undertaker activities will be included to show operational parity.
- 14.1.1.3 The performance metrics will be based upon Operational Measures and Key Performance Indicators that will enable permit authorities to monitor their own performance and continuous improvement year on year.
- 14.1.1.4 Permit authorities will make every reasonable effort to obtain data for these measures in a consistent manner. However, it is recognised that different EToN systems may not be able to provide some of this data and some permit authorities may not be able to collate some measures or KPIs accurately or with confidence. There is therefore also a requirement that permit authorities keep records outside of their EToN system.
- 14.1.1.5 KPIs and Operational Measures will be published monthly by individual WaSP scheme authorities and will be made available in a raw format (without additional analysis) on their websites and at performance and coordination meetings.
- 14.1.1.6 An annual report will be produced by each individual Permit Authority to evaluate the scheme objectives within their operational area.
- 14.1.1.7 It may be that the WaSP scheme authorities as a group compare and evaluate the annual KPIs and Operational Measures more fully to consider how the scheme operates across the region as a whole and to look at standardising practices and identify differences.

14.2 Operational Performance Measures

- 14.2.1.1 Operational measures will be used to provide a year on year quantification of aspects of the scheme, which will allow the operators to evaluate and review the scheme and provide trends and data to enable a more comprehensive analysis of the scheme's operation.
- 14.2.1.2 The measures can be quantified both against baseline data collected on selected streets prior to the commencement of the scheme, and against neighbouring authorities (those operating and those not operating a permit scheme), or simply ongoing yearly comparative analysis.
- 14.2.1.3 Permit authorities may include their own performance monitoring measures as part of their local political, community or departmental requirements.
- 14.2.1.4 Operational measures detailed in this document are 'draft' metrics. This will allow them to be open to change as new reporting tools or more consistent methods of analysis across the industry are developed, either by the WaSP Operational Groups, the EToN suppliers, the DfT or the National KPI working group.
- 14.2.1.5 The WaSP scheme Operational Guidance provides advice on the detail of what data needs to be recorded or extracted for each of the metrics.
- 14.2.1.6 It is accepted that some authorities will not be able to produce some of the following metrics due to systems or technology limitations.

14.2.2 Number of overrun incidents

14.2.2.1 The number of activities that are logged by the Permit Authority as overrunning their agreed end date is an indicator of how well the activity promoters are managing their works and lessening the impact of their works on road users.

14.2.2.2 This measure will also allow comparison with neighbouring non-permitting councils to be made. It will be expressed as:

- The number overrun incidents shown as a percentage of permits issued

14.2.2.3 Extension requests will be considered by each Permit Authority on their own merits. See Section 8.2.3.

14.2.3 Average road occupancy and number of days of reduced occupation

14.2.3.1 One of the benefits of permits is that works durations can be judged more effectively and the use of conditions is a greater driver for tighter processes from all activity promoters to reduce their occupation on the highway.

14.2.3.2 Additionally analysis of activities that have had their duration reduced, and my how much, will show how the Permit Authority and activity promoters are reducing the overall impact of activities on the highway. It will be expressed as

- The average number of working days for different works categories as compared between periods and other authorities
- The total number of days of reduced occupation for different works categories as compared between periods and other authorities

14.2.4 Number of collaborative works and the days of saved occupation

14.2.4.1 The potential economic benefits from shared working space are considerable. In addition, this will show a proactive and positive approach to working together to minimise disruption and occupancy. The number of collaborative works will be expressed as:

- a percentage of all works granted per period.
- as an ongoing measure, this will also be expressed as the number of collaborative works sites per period, thus enabling a percentage increase/reduction to be calculated.

14.2.4.2 Any activity on the highway will be included to show how the Permit Authority is able to coordinate works and other activities proactively.

14.2.5 The number of refused permits by refusal reason

14.2.5.1 Actual numbers of applications refused are part of KPI1 and are an indicator of parity.

14.2.5.2 Monitoring permit refusals will show clearly the most common reasons for refusal. This is helpful to the activity promoter to identify particular areas where they are failing. The WaSP scheme Operational Guidance will provide a template of standardised refusal codes and texts that must be used by all permit authorities.

14.2.5.3 This measure will also show any improvements for each period for the way promoters deal with systematic failures within their processes. It will therefore be a measure of how information quality is improving. It will be expressed as

- The number of each category of failure as a comparison of previous periods

14.2.6 Number of cancellations as a percentage of granted permits

14.2.6.1 Since there is a fee for a permit, a statutory undertaker must pay for this even if the works subsequently do not go ahead. This is therefore a disincentive for works to be subsequently cancelled.

14.2.6.2 This measure will compare year on year rates of permit cancellation, and more particularly show how these rates fall from those under the notification system. This has a direct benefit to the Permit Authority and the activity promoter since it shows better works management and allows officers and staff to use their time more productively. This measure will be expressed as

- the proportion of notices/permits cancelled each period.

14.2.7 First time permanent reinstatements

14.2.7.1 Undertaking a first time permanent reinstatement can reduce general disruption, particularly when traffic management is in place, by removing the need for a return visit to a site.

14.2.7.2 Measuring the number of interim reinstatements or the number of first time permanent reinstatements provides a comparison to be made each period, and also allows targets for the WaSP scheme authority to be set to try to drive down interim reinstatements. The metric will be expressed as

- The number of interim reinstatements undertaken as a percentage of total permits issued.

14.2.8 Category A 'in progress' inspection results

14.2.8.1 Category A inspections under the NRSWA *Code of Practice for Inspections* look at the way a site is set up; suitability of traffic management, signing and guarding and site safety. This is not just for vehicular traffic, it has particular significance for the safety of pedestrians and those with a disability. This metric will allow

- year on year inspection results to show improvements in this element of works
- comparison between permit authorities and enable them to consider different inspection regimes and gain a standardised approach to these inspections
- comparison between highway authority activities and utility activities

14.2.8.2 The metric will be expressed as the number of failed category A inspections shown as a percentage of the total A inspections undertaken within a period.

14.2.8.3 Where possible the Permit Authority should include highway authority works in their inspection regime. However this is not a requirement under the Permit Scheme Regulations. If these figures are recorded by the Permit Authority and are considerably lower in number for highway authority activities it should not be taken as an issue of parity, simply one of process. However this scheme strongly recommends each Permit Authority inspect their own works for road purposes in the same way as utility works as a matter of course.

14.2.9 Permit condition inspection results

14.2.9.1 EToN 6 provides for specific permit compliance inspections which will provide a measure of when the works are compliant and at what stage the works are at

14.2.9.2 Additionally this measure can be evaluated from the number and types of fixed penalty notices issued under regulation 20 (breach of permit condition).

14.2.9.3 It is anticipated that any site that is inspected for a category A inspection will also have a permit conditions checked (and vice versa) and therefore the metric will be expressed in terms of the A inspection figures since different authorities may have different inspection regimes that include more than the statutory 10% random sample. This will allow a general comparison between authorities to be made. This will be expressed as

- Total numbers of FPNs issued under Regulation 20
- The number of individual types of condition breaches under Regulation 20

- The percentage of FPNs against the number of inspections undertaken

14.3 Limits to providing Operational Measures

- 14.3.1.1 EToN systems used across Permit Authorities have slightly different rule sets about how certain data is extracted or reported upon and therefore it is accepted that this will make it difficult for all permit authorities who are part of this scheme to provide accurate and comparable KPIs and associated measures. Every effort will be made to ensure that all of the data is obtained in as consistent a format as possible across all authorities and details of this are provided in the WaSP scheme Operational Guidance.

14.4 Working Groups

- 14.4.1.1 An aim of this common scheme is to commit members to continuous improvement of the scheme by promoting closer working relationships between permitting authorities and all promoters. It is the intention of the WaSP permitting authorities to closer align their processes and to continue to work with the activity promoters to address issues as they arise.
- 14.4.1.2 It is anticipated that all permit authorities operating the scheme will form a scheme oversight committee, and from this will establish small working groups to consider specific aspects of the scheme or its operation. These may look at:
- Operational principles
 - Best practice
 - Site safety
 - Fixed Penalty Notice application
 - Operational Measures and KPI data collation
 - Innovation
 - Legal issues
- 14.4.1.3 The working groups will also provide a point of reference for establishing best practice and encouraging enterprise and innovation in the region from permit authorities and activity promoters.
- 14.4.1.4 Working groups will develop permit advice notes specific to the scheme to encourage consistent application of the scheme principles by both permit authorities and activity promoters.
- 14.4.1.5 Working groups may consider the usefulness of setting specific targets for permit authorities or activity promoters based around one or more sets of operational measures.
- 14.4.1.6 The working groups will publish their minutes openly and encourage discussion between different parties.

15 Varying and Ceasing to Operate the WaSP Scheme

15.1 Varying the Permit Scheme

- 15.1.1.1 It may be necessary to change the Permit Scheme from time to time.
- 15.1.1.2 As the WaSP Scheme is a Common Scheme it will only be possible to change the principal Permit Scheme where all the Permit Authorities reach a unanimous decision in favour of varying the Permit Scheme. To do so each Permit Authority will amend the Order and exercise their powers conferred by Section 33A(2) of the Traffic Management Act 2004 to make this Order
- 15.1.1.3 In accordance with Permit Scheme Regulations, prior to amending the Order the proposed changes to the Permit Scheme will be subject to consultation with the persons specified in Permit Scheme Regulations. The consultation period will be proportionate to the nature and significance of the change.

15.2 Ceasing to Run the Permit Scheme

- 15.2.1.1 If a Permit Authority wishes to cease to run the Permit Scheme, in accordance to Permit Scheme Regulations, they will first consult all specified persons and then revoke the Permit Scheme.
- 15.2.1.2 Until the Order is also revoked by the Permit Authority the Permit Scheme will continue in operation in that Permit Authority's area..

16 Conflict with other Legislation and Legal Liability

- 16.1.1.1 The Permit Authority will work with activity promoters to promote safe working practices and all parties must act reasonably and responsibly. Each situation will be considered on its merits.
- 16.1.1.2 The Permit Authority will try to ensure that any conditions applied to a permit do not conflict with the activity promoter's obligations under separate legislation. The Permit Authority's intention is that an activity promoter should not be put in a position where they cannot escape being in breach of either permit conditions or other relevant legislation.
- 16.1.1.3 The activity promoter should bring such concerns, conflicts or potential conflicts to the attention of the Permit Authority as soon as is practicable. The Permit Authority will be responsible for resolving the issue with the other body or bodies concerned, e.g. Environmental Health officials, and amending the permit conditions accordingly. If they are not satisfied the activity promoter may invoke the dispute resolution procedure.
- 16.1.1.4 The applicant will be liable for all actions, costs, claims, demands, charges and expense arising out of any activity covered by the WaSP scheme, including those that may arise out of, or be incidental to, the execution of the works.
- 16.1.1.5 Part 8 of the Permit Scheme Regulations provides for the disapplication of certain sections of NRSWA, details of which are contained in appendix B of this document.

17 Appendix

17.1 APPENDIX A – Glossary of Terms

Activity, activity promoter	Covers both utilities' street works and highway authorities' own works. See Promoter.
Above ground works	Any works (not being overhead works) which do not involve the breaking up or opening of the street or tunnelling or boring under it
Additional street data ("ASD")	Additional Street Data ("ASD") refers to other information about streets held on the NSG concessionaire's website alongside the NSG.
Apparatus	As defined in Section 105 (1) of NRSWA "apparatus includes any structure for the lodging therein of apparatus or for gaining access to apparatus".
Appeal	Where there is an unresolved disagreement between the activity promoter and the Permit Authority about a Permit Authority's decision or actions the promoter may appeal using the procedure in Section 15 of LoPS.
Arbitration	As defined in section 99 of NRSWA, "any matter which under this Part is to be settled by arbitration shall be referred to a single arbitrator appointed by agreement between the parties concerned or, in default of agreement, by the President of the Institution of Civil Engineers"
Bank holiday	As defined in Section 98 (3) of NRSWA, "bank holiday means a day which is a bank holiday under the Banking and Financial Dealings Act 1971 in the locality in which the street in question is situated".
Bar hole	A bar hole is used to detect and monitor gas leaks as described in the code of practice for permits.
Breaking up (the street)	Any disturbance to the surface of the street (other than opening the street).
Bridge	As it says in section 88(1)(a) of NRSWA, "references to a bridge include so much of any street as gives access to the bridge and any embankment, retaining wall or other work or substance supporting or protecting that part of the street"
Bridge authority	As defined in section 88(1)(b) of NRSWA, "bridge authority means the authority, body or person in whom a bridge is vested"
Bridleway	As defined in section 329 of the HA 1980, "bridleway means a highway over which the public have the following, but no other, rights of way, that is to say, a right of way on foot and a right of way on horseback or leading a horse, with or without a right to drive animals of any description along the highway"
BS7666	British Standard number 7666 relating to gazetteers.
Carriageway	As defined in section 329 of HA 1980, "carriageway means a way constituting or comprised in a highway, being a way (other than a cycle track) over which the public have a right of way for the passage of vehicles"
Central Register	A central register is a register covering two or more street authority areas that is maintained by one single authority, the 'register authority'. For example, a central register could include all authorities in a metropolitan area.
Code of Practice for Permits	As published by Department for Transport March 2008.
Contravention	As defined in section 329 of HA 1980, "contravention in relation to a condition, restriction or requirement, includes failure to comply with that
Co-ordination Meetings	Quarterly meetings to co-ordinate works in highway authority and neighbouring authorities roads.
Council	As defined in section 329 of HA 1980, "council means a county council, the Great London Council or a local authority"
Critical gyratory or roundabout system	A gyratory or roundabout system where, in the absence of street works or works for road purposes, no less than 5 per cent of peak hour vehicles on average are delayed by more than 20 seconds.
Critical signalised	A traffic signal junction at which, in the absence of street works or works

junction	for road purposes and at times when the exit is not blocked, no less than 5 per cent of peak hour vehicles on average fail to clear the junction on the first green signal.
Culvert	A structure in the form of a large pipe or pipes, box or enclosed channel generally used for conveying water under a road.
Cycle track	As defined in Section 329 of the HA 1980, "cycle track means a way constituting or comprised in a highway, being a way over which the public have the following, but not other, rights of way, that is to say, a right of way on pedal cycles with or without a right of way on foot".
Day	In the context of the duration of activities, a day refers to a working day, unless explicitly stated otherwise.
DfT	Department for Transport.
Disability	As defined in section 105(5) of NRSWA, "section 28 of the Chronically Sick and Disabled Persons Act 1970 (power to define "disability" and other expressions) applies in relation to the provisions of this Part as to the provisions of that Act".
Disability Equality Duty	Means the duty under Section 49A of the Disability Discrimination Act 1995, inserted by the Disability Discrimination Act 2005 which requires that "(1) Every public authority shall in carrying out its functions have due regard to— (a) the need to eliminate discrimination that is unlawful under this Act; (b) the need to eliminate harassment of disabled persons that is related to their disabilities; (c) the need to promote equality of opportunity between disabled persons and other persons; (d) the need to take steps to take account of disabled persons' disabilities, even where that involves treating disabled persons more favourably than other persons; (e) the need to promote positive attitudes towards disabled persons; and (f) the need to encourage participation by disabled persons in public life. (2) Subsection (1) is without prejudice to any obligation of a public authority to comply with any other provision of this Act.
Distribution Network Operator (DNO)	Operator of an electricity distribution network.
e-government	The Government objective to deliver efficiency savings while improving the delivery of public services by joining up electronic government services around the needs of customers.
Emergency works	As defined in section 52 of NRSWA
EToN	Electronic Transfer of Notifications, the system defined in the Technical Specification for EToN for passing notices, permit applications, permits and other information between promoters and the Permit Authority.
Excavation	"Breaking up" (as defined above).
Extensible Markup Language (XML)	A self-describing data format providing (amongst other things) a method of transferring data between systems. Note that the UK Government eGIF standard mandates XML for this purpose.
File transfer protocol (FTP)	A method of transferring data between computers defined by RFC959 (RFCs - Request for Comments) are the standard documents that define the operation of the internet).
Fixed Penalty Notice	As defined in schedule 4B to NRSWA, "fixed penalty notice means a notice offering a person the opportunity of discharging any liability to conviction for a fixed penalty offence by payment of a penalty".
Footpath	As defined in Section 329 of the HA 1980, "footpath means a highway over which the public have a right of way on foot only, not being a footway".
Footway	As defined in Section 329 of the HA 1980, "footway means a way comprised in a highway which also comprises a carriageway, being a way over which the public have a right of way on foot only".
Frontager	A person or body occupying premises abutting the street.
Frontagers	A person or body occupying premises abutting the street.
Geographical information	A computer system for capturing, storing, checking, integrating, manipulating, analysing and displaying data related to positions on the

system (GIS)	Earth's surface.
HA 1980	The Highways Act 1980.
HAUC(UK)	The Highway Authorities and Utilities Committee for the UK.
Heavy commercial vehicle	As defined in Section 138 of the Road Traffic Regulation Act 1984, "heavy commercial vehicle means any goods vehicle which has an operating weight exceeding 7.5 tonnes".
Highway	As defined in Section 328 of the HA 1980, "highway means the whole or part of a highway other than a ferry or waterway".
Highway Authority	As defined in sections 1 and 329 of the HA 1980.
Highway works	"works for road purposes" or "major highway works".
Highways Act 1980	(dual carriageways and roundabouts); (c) substantial alteration of the level of the highway; (d) provision, alteration of the position or width, or substantial alteration in the level of a carriageway, footway or cycle track in the highway; (e) the construction or removal of a road hump within the meaning of section 90F of the Highways Act 1980; (f) works carried out in exercise of the powers conferred by section 184 of the Highways Act 1980 (vehicle crossings over footways and verges); (g) provision of a cattle-grid in the highway or works ancillary thereto; or (h) tunnelling or boring under the highway"
Immediate activities	immediate activities are either emergency works as defined in section 52 of NRSWA or urgent works as defined in The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007.
In	As defined in section 105(1) of NRSWA
KPI (Key Performance Indicator)	One of the DFT performance indicators used to show parity as defined in Regulation 40, and provided in the Code of Practice for Permits. See Chapter 14.
Land	As defined in section 329 of HA 1980, "land includes land covered by water and any interest or right in, over or under land".
Local authority	As defined in section 270(1) of the Local Government Act 1972 and includes the Common Council of the City of London.
Local planning authority	Local planning authority has the same meaning as in the Town and Country Planning Act 1990"
Local register	A local register is a register that is maintained by a single street authority for their own geographic area and will include information on all streets other than those streets that are the responsibility of another street authority
Local street gazetteer	A subset of the NSG containing details of all streets in a local highway authority area, being a self-contained entity created and maintained by the local highway authority covering all streets in their geographic area regardless of maintenance responsibility
Main roads	All streets in reinstatement categories 0, 1 and 2 and those streets in categories 3 and 4 which are traffic sensitive for all or part of the time.
Maintainable highway	As defined in section 329 of HA 1980
Maintainable highway	As defined in section 329 of HA 1980, a "highway maintainable at the public expense means a highway which by virtue of section 36 above or of any other enactment (whether contained in this Act or not) is a highway which for the purposes of this Act is a highway maintainable at the public expense"
Maintenance	As defined in section 329 of HA 1980, "maintenance includes repair, and "maintain" and "maintainable" are to be construed accordingly"
Major activities	As defined in The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007 major activities are activities which have been identified in a promoter's annual operating programme, or if not identified in that programme, are normally planned or known about at least six months in advance of the date proposed for the activity; or activities, other than immediate activities, where (i) the authority has indicated to the promoter, or (ii) the promoter considers,

	that an order under section 14 of the Road Traffic Regulation Act 1984 (temporary prohibition or restriction on roads) is required; or activities, other than immediate activities, which have a planned duration of 11 days or more".
Major bridge works	As defined in section 88(2) of NRSWA, "major bridge works means works for the replacement, reconstruction or substantial alteration of a bridge"
Major highway works	As defined in section 86(3) of NRSWA, "major highway works means works of any of the following descriptions executed by the highway authority in relation to a highway which consists of or includes a carriageway - (a) a reconstruction or widening of the highway; (b) works carried out in exercise of the powers conferred by section 64 of the Highways Act 1980 (dual carriageways and roundabouts); (c) substantial alteration of the level of the highway; (d) provision, alteration of the position or width, or substantial alteration in the level of a carriageway, footway or cycle track in the highway; (e) the construction or removal of a road hump within the meaning of section 90F of the Highways Act 1980; (f) works carried out in exercise of the powers conferred by section 184 of the Highways Act 1980 (vehicle crossings over footways and verges); (g) provision of a cattle-grid in the highway or works ancillary thereto; or (h) tunnelling or boring under the highway"
Major transport works	As defined in section 91(2) of NRSWA, "major transport works means substantial works required for the purposes of a transport undertaking and executed in property held or used for the purposes of the undertaking"
Minor activities	Are minor works as defined in The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007 as those activities other than immediate activities where the planned duration is 3 days or less
Minor roads	Streets in reinstatement categories 3 and 4 which are not traffic sensitive at any time.
National Grid Reference	Location reference using nationally defined eastings and northings The format in which it is presented must in all cases match that required by the Technical Specification for EToN.
National Land and Property Gazetteer (NLPG)	Gazetteer providing a national reference of land and property related Data Nationally consistent street gazetteer (NSG), a database defined as "an index of streets and their geographical locations created and maintained by the local highway authorities" based on the BS7666 standard
National Street Gazetteer (NSG) –also referred to as Nationally Consistent Street Gazetteer	A database defined as "an index of streets and their geographical locations created and maintained by the local highway authorities" based on the BS7666 standard.
Network management duty	As stated in Part 2 of TMA.
Notice management system	Notice management systems receive electronic street works notices and are used by street authorities to manage them together with other relevant information.
NRSWA	New Roads and Street Works Act 1991.
NSG	The body appointed to manage the NSG on behalf of the local highway authorities.
Concessionaire	operational district data
ODD	
OM (Operational Measure)	One of the permit scheme metrics, see Chapter 14
Opening (the street)	Removing a lid or cover to a manhole, inspection chamber, meter box or other structure embedded in the street without any "breaking up" of the street.
Order	Unless otherwise specific, "Order" means a document signed by a

	person authorised by the Permit Authority to give effect, vary or revoke a permit scheme.
Ordnance Survey Grid	A spatial location based on the geospatially referenced national grid owned by the Ordnance Survey.
OSGR	Ordnance Survey Grid Reference
Passenger Transport Authority	One of seven authorities (Greater Manchester, Merseyside, South Yorkshire, Strathclyde, Tyne & Wear, West Midlands and West Yorkshire) made up of representatives from local authorities in the area, responsible for public transport in their area
Passenger Transport Executive	The executive arm of a Passenger Transport Authority
Pedestrian Planning Order	This refers to an order made under section 249(2) or (2A) of the Town and Country Planning Act 1990(6)
Permit	The approval of a permit authority for an activity promoter to carry out activity in the highway subject to conditions.
Permit application	The application that is made by a promoter to the authority to carry out an activity in the highway. It is equivalent to the notice of proposed start of works (section 55 of NRSWA) given under the Co-ordination regime.
Permit Authority	The relevant local highway authority, which has prepared a permit scheme under section 33(1) or (2) of the Traffic Management Act 2004.
Permit Management System	A computer based system to record permit applications and consents
Permit Scheme Regulations	Means the Traffic Management Permit Scheme (England) Regulations 2007, Statutory Instrument 2007 No. 3372 made on 28 November 2007 and the Traffic Management Permit Scheme (England) (Amendment) Regulations, Statutory Instrument 2015 No. 958 made on 26th March 2015.
Prescribed	As defined in Section 104 of NRSWA, "prescribed means prescribed by the Secretary of State by Regulations, which may (unless the context otherwise requires) make different provision for different cases".
Promoter	A person or organisation responsible for commissioning activities in the streets covered by the permit scheme. In the Permit Scheme promoters will be either statutory undertakers or the highway or traffic authority.
Protected street	are defined in NRSWA s61 (1)
Provisional Advance Authorisation (PAA)	The early approval of activities in the highway, equivalent to the advance notice given under s 54 of NRSWA.
Provisional street	A provisional street is a street that does not yet have an entry in the NSG. Typically these will be newly created and/ or private streets
Public sewer	Public sewer has the same meaning as in the Water Industry Act 1991
Railway	As defined in section 105(1) of NRSWA, "railway includes a light railway other than one in the nature of a tramway".
Reasonable period	As defined in section 74(2) of NRSWA,
Reasonable times	Reasonable times may be taken to mean normal office hours (08:00 to 16:30, Monday to Friday except Bank Holidays)
REC	Regional electricity company
Registerable activities	Registerable activities correspond to what are "specified works" in the Traffic Management Permit Schemes (England) Regulations 2007.
Reinstatement	As defined in section 105(1) of NRSWA, "reinstatement includes making good".
Relevant authority	As defined in section 49(6) of NRSWA,
Remedial work	Remedial works are those required to put right defects identified in accordance with the provisions of the Code of Practice for Inspections and the associated regulations.

Road	"Highway".
Road category	This means one of the road categories specified in Chapter S.1 of the code of practice entitled "Specification for the Reinstatement of Openings in Highways" dated June 2002, as revised or re-issued from time to time
Road works	Works for road purposes.
Schema	XML) Schemas express shared vocabularies and allow machines to carry out rules made by people. They provide means for defining the structure, content and semantics of XML documents.
Sewer	Sewer as defined in the Water Industry Act 1991 " includes all sewers and drains (not being drains within the meaning given by this subsection) which are used for the drainage of buildings and yards appurtenant to buildings".
Sewer authority	As defined in section 89(1)(b) of NRSWA,
Small Openings and Small Excavations	All openings with a surface area of two square metres or less.
Special Engineering Difficulties (SED)	By virtue of section 63 of NRSWA, the term special engineering difficulties relates to streets or, more commonly, parts of streets associated with structures, or streets or extraordinary construction where street works must be carefully planned and executed in order to avoid damage to, or failure of, the street itself or the associated structure with attendant danger to person or property.
Standard activities	Are standard works as defined in The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007. These are activities, other than Immediate activities, that have a duration of between 4 and 10 days inclusive.
Strategically significant streets (SSS)	Definition given in the 'Permit Schemes – Additional Guidance (January 2013)': " Strategically significant streets includes traffic sensitive streets as defined under regulation 16 of The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007 as well as streets which fall into reinstatement categories 0, 1 or 2 as defined in section 1.3 of the Statutory Reinstatement of Highways 2010.' [It should be noted that from time to time to ensure effective traffic management, other streets may be included]."
Statutory Guidance for Permit Conditions	Means the Statutory Guidance for Highway Authority Permit Schemes – Permit Scheme Conditions", the most recent publication, issued by the Secretary of State pursuant to section 33(5)(b) of the Traffic Management Act 2004.
Statutory Guidance for Permits	Means the Statutory Guidance for Permits", the most recent publication.
Street	As defined in section 48(1) of NRSWA
Street authority	As defined in section 49(1) of NRSWA,
Street works	As defined in section 48(3) of NRSWA,
Street works licence	As stated in section 50(1) of NRSWA,
Temporary Traffic Regulation Order	This means an Order made under section 1, 6, 9 or 14 of the Road Traffic Regulation Act 1984.
Terms, Permit terms	The works promoter specified activity at the specified location at specified times executed in a specified way etc. as defined in a granted, deemed or varied permit.
TMA	The Traffic Management Act 2004.
Traffic	As defined in section 105(1) of NRSWA, "traffic includes pedestrians and animals".
Traffic authority	As defined in section 121A of the Road Traffic Regulation Act 1984:
Traffic control	Any of the five methods of controlling traffic detailed in the Code of Practice "Safety at Street Works and Road Works".
Traffic flow	The number of vehicles using the particular street at specified times of

	the day and year, measured in accordance with DfT guidelines.
Traffic Management	Traffic management is dictated by road space/occupation. Permit Scheme Regulations note that: "traffic management arrangements" includes signs, signals, road markings, barriers and other measures which are intended to secure the expeditious, convenient and safe movement of vehicular and other traffic (including pedestrians).
Traffic order	This means an order made under section 1, 6 or 9 of the Road Traffic Regulation Act 1984
Traffic-sensitive street	This means a street designated by a street authority as traffic sensitive pursuant to section 64 of NRSWA and in a case where a limited designation is made pursuant to section 64(3) any reference to works in a traffic sensitive street shall be construed as a reference to works to be executed at the times and dates specified in such designation
Traffic-sensitive Time	In relation to a traffic-sensitive street, means: the times or dates specified in the case of a limited designation; and any time in any other case.
Traffic sign	As defined in section 105(1) of NRSWA, "traffic sign has the same meaning as in the Road Traffic Regulation Act 1984"
Tramway	As defined in section 105(1) of NRSWA, "tramway means a system, mainly or exclusively for the carriage of passengers, using vehicles guided, or powered by energy transmitted, by rails or other fixed apparatus installed exclusively or mainly in a street"
Transport authority	As defined in section 91(1)(a) of NRSWA, "transport authority means the authority, body or person having the control or management of a transport undertaking"
Transport undertaking	As defined in section 91(1)(b) of NRSWA, "transport undertaking means a railway, tramway, dock, harbour, pier, canal or inland navigation undertaking of which the activities, or some of the activities, are carried on under statutory authority"
Trunk road	As defined in section 329 of the HA 1980,
Type 1 (or 2, or 3) gazetteer	As defined in the British Standard BS7666.
Undertaker	As defined in section 48(4) of NRSWA,
Unique street reference number (USRN)	As defined in the British Standard BS7666.
Urgent activities	Are urgent works as defined in The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007
Working day	As defined in section 98(2) of NRSWA,
Works	Street works or works for road purposes.
Works clear	A notice under NRSWA s74(5C) following interim reinstatement.
Works closed	A under NRSWA s74(5C) following permanent reinstatement.
Works for road purpose	As defined in section 86(2) of NRSWA,
XML	Extensible Markup Language

17.2 APPENDIX B – Modifications and Disapplication of NRSWA

B.1 Disapplication of NRSWA

The Permit Scheme Regulations disapply or modify certain sections of NRSWA. In permit areas the duties of activity promoters and street authorities under the following sections of NRSWA are replaced by equivalent duties imposed under Part 3 of the TMA and the Permit Scheme Regulations .

NRSWA section		Change	Permit Scheme Regulations – Revised arrangements
S53	The street works register	Disapplied	Permit Scheme Regulations prescribe similar provisions for permit registers
S54	Advance notice of certain works	Disapplied	Replaced by applications for provisional advance authorisation.
S55	Notice of starting works	Disapplied	Replaced by applications for permits
S56	Power to direct timing of street works	Disapplied	Replaced by permit conditions and variations, including those initiated by the permit authority.
S57	Notice of emergency works	Disapplied	Replaced by applications for immediate activities.
S66	Avoidance of unnecessary delay or obstruction	Disapplied	Replaced by equivalent provisions for permit authorities to require promoters in breach of the permit requirements to take remedial action and failing that for the authority to act. 24-hour compliance period to be replaced with a requirement for promoters to comply within a reasonable specified period determined by the circumstances.

Table 2: Promoter's Duties – disapplied sections of NRSWA

NRSWA section		Change	Permit Scheme Regulations – Revised arrangements
S58	Restriction on works following substantial road works	Modified	The authority's ability to issue permits with start and end dates replaces directions to start work covered in S 58(5) to (78). The Permit Scheme Regulations provide the equivalent of S 58A powers by allowing authorities to take into account whether promoters responded to the S 58 notice by submitting an application for their planned activities.
S58A	Restriction on works following substantial street works	Modified	Schedule 3A is modified to work in conjunction with permits.
S64	Traffic-sensitive streets	Modified	Permit Scheme Regulations provide that permit applicant are notified of proposals to designate streets as traffic-sensitive streets.
S69	Works likely to affect other apparatus in the street	Effectively extended	Permit Scheme Regulations create an equivalent requirement on highway authority promoters.
S74	Charge for occupation of the highway where works are unreasonably prolonged	Modified	Permit Scheme Regulations make provision to operate in parallel with permits.
S88	Bridge, bridge authorities and related matters	Modified	Modified to work in conjunction with permits.
S89	Public sewers, sewer authorities and related matters	Modified	Modified to work in conjunction with permits.
S90	Provisions as to reinstatement of sewers, drains or tunnels	Modified	Modified to work in conjunction with permits.
S93	Works affecting level crossings or	Modified	Modified to work in conjunction with permits.

	tramways		
--	----------	--	--

Table 3 Promoter’s duties – modifications to NRSWA

17.3 APPENDIX C – The Register

C.1 Introduction

- 17.3.1.1 The Permit Scheme Regulations require each permit authority to maintain a register of each street covered by their scheme. The register should contain information about all registerable activities on those streets and forward planning information about activities and other events which could potentially affect users of the streets.
- 17.3.1.2 Permit authorities will still need a register under section 53 of NRSWA for street information. This will cover those streets that are not part of the permit scheme including non-maintainable streets.
- 17.3.1.3 Requirements for NRSWA registers are contained in the Code of Practice for Coordination of Street Works and Works for Road Purposes and Related Matters.
- 17.3.1.4 It is recommended that authorities meet the statutory requirements for maintaining the two registers in such a way that the information can be combined easily to aid the coordination of activities and to provide information to road users.
- 17.3.1.5 Permit and notice management systems receive notices and permit applications electronically and allow an authority to manage them together with other relevant information. It often happens that one computer system doubles-up as the register and the permit and notice management system in a permit authority. This is acceptable provided the system fully meets the requirements for both Registers and Notice Management Systems.

C.2 Register Keepers

- 17.3.1.6 For maintainable highways, the permit authority will usually be the highway authority.
- 17.3.1.7 For streets which are not maintainable highways (non-publicly maintainable or private streets) the street authority is the street manager. Maintaining a register might impose unreasonable burdens on street managers who are often just the householders fronting the street, so the regulations under NRSWA exempt street managers from the requirement to keep registers. Instead the local highway authority is required to keep the register of non-maintainable highways. As permit schemes do not apply to private streets, the record of activities in those streets would consist of notices under NRSWA and the street authority should continue to keep these on the NRSWA section 53 street works register.

C.3 Local and Central Registers

- 17.3.1.8 A local register is a register that is maintained by a single permit or street authority for its own geographic area. It will include information on all streets other than those streets that are the responsibility of another authority.
- 17.3.1.9 A central register is a register covering two or more authority areas that is maintained by one single authority, the 'register authority'. A central register could, for example, include all authorities in a metropolitan area.

C.4 Form of Registers

17.3.1.10 The register shall be kept on an electronic system. *The Street Works (Registers, Notices, Directions and Designations) (England) Regulations 2007* require that all registers shall use GIS by April 2009. Permit registers should follow this requirement to ensure consistency between all holdings of street-related data. Each register must be maintained against the same digital map base to ensure consistency between all holdings of street-related data. This common geographical dataset should be vector based, nationally consistent, maintained and seamless, with changes published on a regular update cycle.

17.3.1.11 It should include:

vector objects (polygons, lines and points) representing real-world geographical features and boundaries, each with well-defined lifecycles and royalty-free unique identifiers suitable for referencing

road centreline geometry objects, each with royalty-free unique identifiers, which reference the road surface and form a complete and fully consistent topological network with no breaks or misalignments at administrative boundaries.

17.3.1.12 All authorities should synchronise their holdings of the common digital map data so that they all contain the same version of the data at any given point in time. Table 2 sets out the minimum specification.

Table 2. The minimum specification of the common map base	
Scale	Urban areas: 1:1250 Rural areas: 1:2500 Remote areas: 1:10000
Accuracy	Urban areas: $\pm 1.0\text{m}$ Rural areas: $\pm 2.0\text{m}$ Remote areas: $\pm 4.0\text{m}$
Coverage	National and seamless, exhausting space over all land areas.
Geometry Types	Point, Line and Polygon.
Classification	Objects classified by physical form.
Update Cycle	8 weeks (max.)

17.3.1.13 All streets in Local Street Gazetteers should reference the road centreline geometries in the common map base (using royalty-free unique identifiers), which should in turn reference polygons representing the road surface. Such a structure promotes consistency and maximises the possibility for interoperability between applications, both in the highway's arena and in a wider context.

17.3.1.14 In essence, local authorities should provide the USRN definitions and attribution as defined in BS7666, while the geometries should be recorded by referencing the road Centreline objects in the digital map base. This will promote reuse and consistency between datasets. All data should follow the principles of the Digital National Framework (www.dnf.org).

C.5 Content of Registers

- The permit register must record:
- copies of all Provisional Advance Authorisation, permit and permit variation applications submitted to the permit authority relating to registerable activities in any street
- copies of all permits and Provisional Advance Authorisations given by the authority, including conditions attached as well as all variations to permits and conditions including any permits "deemed" granted (see 11.1.4)

- copies of all revoked permits, refused Provisional Advance Authorisations and refused permits, together with the reasons for such refusals;
- copies of all notices, consents and directions served by a street authority under section 58 or 58A of NRSWA;
- copies of all notices served by a promoter under sections 58 and 58A of NRSWA
- copies of all notices given under section 74 of NRSWA
- description and location of activities for which plans and sections have been submitted under Schedule 4 of NRSWA (streets with special engineering difficulties)
- particulars of notices given by any relevant authority under Schedule 4 of NRSWA
- particulars of street works licences under section 50 of NRSWA, including details of conditions and changes of ownership and of any NRSWA notices or directions associated with those licenses;
- information under section 70(3) and (4A) of NRSWA as to completion of reinstatements;
- particulars of apparatus notified to the street authority under section 80(2) of NRSWA;
- every notice of works pursuant to section 85(2) of NRSWA;
- details of every street for which the local highway authority are the street authority;
- details of every street which is a prospectively maintainable highway over which a permit scheme would operate;
- details of every street over which a permit scheme would operate, of which the local authority is aware, which is a highway but for which it is not the highway authority;
- details of every street which is a) a protected street; b) a street with special engineering difficulties; c) a traffic-sensitive street.

17.3.1.15 Authorities should ensure that their register also includes the following items, which are contained within the ASD:

- the road category of each street;
- details of every street where early notification of immediate activities is required.

C.6 Access to Registered Information

C.6.1 Access to registers

17.3.1.16 Everyone has a right to inspect the register, free of charge, at all reasonable times, except as noted in 3.6.2. "All reasonable times" may be taken to mean normal office hours (e.g. 08:00 to 16:30, Monday to Friday except Bank Holidays).

17.3.1.17 Permit authorities are strongly recommended to publish their register on their public website. This should be available 24 hours a day, seven days a week, except for those occasional times when it will be unavailable due to upgrade and maintenance. This work should, wherever possible, be done outside normal office hours.

- 17.3.1.18 Much of the detailed information in the register is unlikely to be of interest to the public. It is therefore suggested that the website display the headline information first and allow users to drill down to more detailed information. However, it is the responsibility of the local authority to decide how much information to make available in this way.
- 17.3.1.19 Permit applications and notices contain confidential information such as names and telephone numbers of contacts in organisations. Authorities should make sure that such information remains confidential. Authorities should also make it clear that they are not responsible for the accuracy of information concerning those activities for which they are not the promoter.
- 17.3.1.20 The website should allow records to be searched by the USRN or the "street descriptor" (the street name, description or street number) as given in the NSG. Highways England has its own methods of disseminating such information on trunk roads and motorways.
- 17.3.1.21 Public access to websites should be read-only to prevent unauthorised amendment to records.

C.6.2 Restricted Information

- 17.3.1.22 Restricted information is anything certified by the Government as a matter of national security, or information which could jeopardise the promoter's commercial interests such as details of a contract under negotiation. The promoter should indicate restricted information on the application.
- 17.3.1.23 Restrictions on the release of information should as limited as possible. In particular, it should not be assumed that because some item of information about an activity needs to be restricted, all information about it needs to be. For example, a Provisional Advance Authorisation might need to be restricted for commercial reasons, whereas a later permit need not be. The case for restriction needs to be considered on an item by- item rather than an activity-by-activity basis.
- 17.3.1.24 The right of access to restricted information is limited to:
- (a) persons authorised to execute any type of activity in the street; or,
 - (b) persons "otherwise appearing to the authority to have a sufficient interest".
- 17.3.1.25 Any person wishing to see restricted information must satisfy the permit authority, as a minimum, that his interest is greater than the general interest of the ordinary member of the public.
- 17.3.1.26 Restricted information should not be shown on highway authorities' websites.

C.6.3 Retention of Information

- 17.3.1.27 Information provided by means of any permit application under the TMA or notice under NRSWA should be retained on the register for at least six years after completion of the guarantee period of the activity referred to in the notice. Information about other activities should be retained on the register for at least six years after completion.
- 17.3.1.28 Any legal claims in relation to the activity must be brought within six years of the date on which the event which forms the basis of the claim occurred. In the case of personal injuries, claims must be brought within three years of the date on which the event happened. However, in the case of a person who is below 18 years of age, the claim can be made up to three years after they reach 18. Information should be kept for those periods for that purpose, which may mean 21 years and nine months in the case of injury to an unborn child.

- 17.3.1.29 Permit authorities will need to decide how to keep the information on the register. Because of the size of the database the authority may decide to archive information, or a subset of the information on the register for a longer period or even indefinitely.
- 17.3.1.30 Both authorities and utility companies will need to obtain their own legal advice and guidance on how to meet these requirements.

17.4 APPENDIX D – The Street Gazetteer

D.1 Introduction

- 17.4.1.1 This chapter provides information about a nationally consistent street gazetteer (NSG) which contains basic and consistent information about all streets in England.

D.2 The Street Gazetteer

- 17.4.1.2 Every local highway authority produces a Local Street Gazetteer (LSG) and a copy is held centrally by the NSG Concessionaire. Each of these local gazetteers shall contain the information, required by and defined in the Technical Specification for EToN, about the streets in that authority's area.
- 17.4.1.3 Permit authorities and activity promoters may obtain full copies and updates of the street data from the NSG Concessionaire's website.

D.2.1 Creating and Updating the NSG

- 17.4.1.4 Street gazetteers shall be created, maintained and published at Level 3 (as defined in BS 7666).
- 17.4.1.5 It is the local highway authority's responsibility to create and maintain street gazetteer data for all streets within their geographical area, whether or not it is the street authority for any particular street.

D.2.2 Referencing

- 17.4.1.6 Information held in permit registers must be referenced to the Unique Street Reference Number (USRN) which relates to the Type 1 or Type 2 street entry given for each street in the street gazetteer - see the Technical Specification for EToN.
- 17.4.1.7 It is essential that all users are working from the same data. In most cases this will be the street gazetteers on the NSG concessionaire's website. The owner of the particular street gazetteer should be able to use their own copy which should be the same as that held by the NSG concessionaire.

D.2.3 Provisional Streets

- 17.4.1.8 A provisional street is a street that does not yet have an entry in the NSG. Typically, these will be new and/or private streets. The street authority must register private streets. A permit application, or Provisional Advance Authorisation application, for a proposed activity should be submitted against a provisional street only if an activity promoter is certain that the street concerned is not in the NSG. It is then the responsibility of the local highway authority to allocate a USRN, notify the activity promoter, and create a level 3 entry in the LSG and SG website. The promoter should then use this USRN in all further permit applications and notifications relating to the activity.
- 17.4.1.9 Under section 87 of NRSWA, a highway authority should make a declaration that a street is likely to become a maintainable highway. The declaration should be registered as a local land charge.

D.2.4 Trunk Road Network

- 17.4.1.10 There is a Trunk Road Street Gazetteer (TRSG) for the motorway and trunk road network maintained by Highways England. Works on streets maintained by the
- 17.4.1.11 Highways England should be notified using the trunk road referencing number (TRRN) contained in the TRSG, instead of the USRN.

D.3 Additional Street Data

- 17.4.1.12 Additional Street Data (ASD) refers to other information about streets held on the NSG Concessionaire's website alongside the NSG data. Highway authorities, activity promoters and other interested and approved parties may obtain copies and updates to this data from the concessionaire.
- 17.4.1.13 Local highway authorities should provide the following information for the ASD:
- (a) the street authority responsible for maintaining the street;
 - (b) whether the street is publicly maintainable, prospectively publicly maintainable, or private;
 - (c) whether the street, or part of the street, is covered by a permit scheme or the NRSWA notification regime, who the permit authority is or street authority is, details of shared streets if this applies, and whether it is an individual, common or joint scheme (see Chapter 7 for definitions of joint and common schemes);
 - (d) any other authorities and activity promoters with an interest in the street;
 - (e) the street reinstatement category;
 - (f) designations of protected streets;
 - (g) designations of streets with special engineering difficulty;
 - (h) designations of traffic-sensitive streets;
 - (i) whether the street is subject to early notification of immediate activities;
 - (j) where possible, streets on which it might be expected that conditions relating to the non-use of that street for new apparatus, but not the maintenance of existing apparatus, may be used;
 - (k) other features of the street, such as structures, environmental areas, parking restrictions, priority lanes, special surfaces, standard surface and special construction needs etc.
- 17.4.1.14 Designations may cover only part of a street or may vary along a street. The relevant detail should be recorded in the ASD.
- 17.4.1.15 In the above list, items (a) to (h) are mandatory and (i), (j) and (k) are optional although street authorities are urged to make full use of these facilities.
- 17.4.1.16 If all parties agree, the ASD may also be required to contain other data for example traffic regulation and parking restriction orders that apply to the street and may need to be lifted temporarily for works or information that the Department for Transport may need from local authorities - such as inventory data.

D.3.1 Responsibility for Creating and Updating

- 17.4.1.17 Where the street authority is also the local highway authority, it creates the ASD together with the NSG.
- 17.4.1.18 Where the street authority is not the local highway authority, it may create and submit its own ASD to the NSG Concessionaire. This should be referenced to the local highway authorities' gazetteers.
- 17.4.1.19 Organisations that fall into this category are:
- Highways England - which manages the motorway and trunk road network in England
 - Transport for London (which manages the main road network within London)
 - Network Rail (which is the street authority for level crossings between the barriers)

- 17.4.1.20 Any other authority, activity promoter or interested party should submit records to the NSG Concessionaire to ensure that their interest in a street is logged. The interest records should be entered into the ASD maintained by the local highway authority. This is particularly appropriate to neighbouring authorities in the exercise of their network management duty. The NSG Concessionaire will administer this process.

D.3.2 Procedures for Creating and Updating

- 17.4.1.21 The relevant authority should forward additions or amendments to the ASD to the NSG Concessionaire using the formats in the Technical Specification for EToN. These become valid as specified in the NRSWA regulations.
- 17.4.1.22 It is essential that all users work from the same data, especially in the case of designations. But it is impractical to require users to download updates from the website daily until dynamic on-line updating is available. Monthly updates are now proposed so that any changes to the ASD will be as current as possible without the requirement for on-line updating. Users of the ASD data must ensure that they are using the most current version of the data.
- 17.4.1.23 Provision for dynamic on-line updating of the NSG and ASD data is expected in the future.

17.5 APPENDIX E – Disruption Effect Score

E.1 Disruption Effect

- 17.5.1.1 The disruption effect score is based on the reduction in capacity resulting from an activity on the highway. The reduction in capacity may be calculated using an algorithm that requires the entry of a number of simple factors. These factors are as follows.

Factor	Description
[P]	The daily traffic flow, measured as an average am/pm peak hour flow in PCUs per hour, so that it takes account of HGV percentages. Source: Highway authority
[W]	The total width in metres of the carriageway (or the width of both carriageways for a dual carriageway road). Source: Ordnance Survey mapping using GIS tools
[S]	The width in metres of the activity occupying the carriageway, or in the case of activities on the footway, this would be the width in metres of the carriageway occupied by attendant vehicles and associated traffic management, as well as the width needed for any incursion of pedestrians, cyclists and horse riders into the carriageway. Source: Established as part of the works planning process

E.2 Calculation of Disruption Effect Score

- 17.5.1.2 The following algorithm is used to calculate the Disruption Effect Score

17.5.1.3
$$\text{Disruption Effect Score} = [(P \times 100) / (1600 \times (W - S) / 3.65)]$$

E.3 Use of Disruption Effect Score

- 17.5.1.4 The disruption effect score has a number of specific uses including:

- Derivation of the Traffic Impact Assessment
- Objective based prioritisation for coordination, and;
- Performance indicators

- 17.5.1.5 However this is not a mandatory requirement

E.4 Impact Assessment

- 17.5.1.6 The impact assessment is a broad indicator of the potential disruption that could arise from an activity on the highway.

E.5.1 Impact on General Traffic

- 17.5.1.7 The impact assessment for general traffic is derived directly from the daily disruption effect score for the activities, as follows:

Disruption Effect Score	Impact
Greater than or equal to 75	Severe
Greater than or equal to 50 and less than 75	Moderate
Greater than or equal to 25 and less than 50	Slight
Less than 25	None

E.5.2 Impact on Buses

- 17.5.1.8 The impact assessment for bus traffic is assessed for defined bus routes only and is derived as follows:

Disruption Effect Score / Factor	Impact
Greater than or equal to 75	Severe
Greater than or equal to 50 and less than 75	Moderate
Dedicated bus lane diverted	Moderate
Greater than or equal to 25 and less than 50	Slight
Less than 25	None

E.5.3 Impact on Pedestrians

- 17.5.1.9 The impact assessment for pedestrian traffic is derived as follows:

Factor	Impact				
	Footway Hierarchy Category				
	1a	1	2	3	4
Closure	Severe	Severe	Severe	Severe	Moderate
Complete diversion	Severe	Severe	Severe	Severe	Slight

Partial diversion	Severe	Severe	Severe	Moderate	Slight
Narrowing >50%	Severe	Severe	Slight	Slight	Slight
Narrowing <50%	Severe	Moderate	Slight	None	None

- 17.5.1.10 A 'complete diversion' of a footway is where a new route for pedestrians has been established, for example where there is a requirement to cross the road to use the opposite footway.
- 17.5.1.11 A 'partial diversion' of a footway is where the route for pedestrians is diverted around the activity's site but remains on the same side of the road.
- 17.5.1.12 In addition, the impact of any activities on footways associated with urban transport facilities will be considered as 'severe'. For the purposes of this section these are any activities on footways that are within 100 metres of an entrance to a bus, tube, railway or tram station.

18 West and Shires Permit Scheme Authority Addendums

- 18.1.1.1 The WaSP Scheme is a 'Common Scheme' but allows certain elements of the scheme to be adjusted to suit individual authorities. This includes the permit fee profiles, additional discounting of fees, transitional arrangements, specific objectives and measures.
- 18.1.1.2 This chapter provides for addendums from each joining WaSP scheme authority to enable it to set out any specific items pertaining to their operation of the WaSP scheme.
- 18.1.1.3 Each Authority will set out these elements in their own specific Addendums.
- 18.1.1.4 The Authority's Addendum is available on the Council's website or upon request to the Council.
